NETGEAR®

Intelligent Edge Managed Switches

Data Sheet

M4300 series

The NETGEAR® M4300 Stackable Switch Series delivers L2/L3/L4 and IPv4/IPv6 cost-effective services for mid-enterprise edge and SMB core deployments with unrivalled ease of use: 10/40 Gigabit models can seamlessly stack with 1 Gigabit models within the series, enabling spine and leaf line-rate topologies. Non-stop forwarding (NSF) virtual chassis architectures provide advanced High Availability (HA) with hitless failover across the stack. Intelligent IGMP+ multicast allows for scalable Pro AV installations at Layer 2 without the PIM complexity. Dual redundant, modular power supplies equipping full width models contribute to business continuity management. Layer 3 feature set includes static, dynamic and policy-based routing – as standard. The NETGEAR M4300 Switch Series is perfect for wireless access, unified communications and professional AV-over-IP installations.

NETGEAR Intelligent Edge Switch solutions combine latest advances in hardware and software engineering for higher flexibility, lower complexity and stronger investment protection, at a high-value price point.

Highlights

Best-in-class stacking

- M4300 is flexible enough for mixed stacking between 10/40 Gigabit and 1 Gigabit models, using any 10G/40G port with any media type (RJ45, SFP+, DAC cables)
- High-availability is another key differentiator for stackable solutions: in case of a master switch failure, NSF and hitless failover ensure the standby switch takes over while forwarding plane continues to forward traffic on the operational stack members without any service interruption

10G/40G modular solution

- The M4300-96X scales from 8 to 96 ports of 10G Ethernet by multiple of 8 ports, and from 2 to 24 ports of 40G Ethernet by multiple of 2 ports
- The 96X lets you start small with copper and fiber, including Multi-Gigabit 2.5G/5G and PoE+ over 10G, and grow later in "non-blocking" mode just by adding port expansion cards

Higher flexibility

- Two half-width M4300 switches can be paired in a single rack space for redundant Top of Rack installations with Auto-iSCSI prioritization
- Removing the need for Layer-3 PIM routing, IGMP+ greatly simplify system architectures with automated IGMP techniques across the entire AV-over-IP network

Lower complexity

- Entire feature set including PTPv2, L2 switching (IGMP+) and L3 routing (static, RIP, OSPF, VRRP, PIM-SSM, PBR) is available without license
- DHCP/BootP innovative auto-installation including firmware and configuration file upload automation

Investment protection

- Line-rate spine and leaf stacking topologies offer multiple possibilities in server rooms, in branch collapsed cores or at the edge of growing networks
- Even if an organization is not ready for high-speed backbone, 10G and 40G models can be added later to stacks of 1G models

Secure services

- With successive tiering, the Authentication Manager allows for authentication methods per port for a tiered authentication based on configured time-outs
- With BYOD, tiered Dot1x -> MAB -> Captive Portal authentication is powerful and simple to implement with strict policies

Industry standard management

- Industry standard command line interface (CLI), functional NETGEAR web interface (GUI), SNMP, sFlow and RSPAN
- Single-pane-of-glass NMS300 management platform with centralized firmware updates and mass-configuration support

Industry leading warranty

- NETGEAR M4300 series is covered under NETGEAR ProSAFE Limited Lifetime Hardware Warranty**
- 90 days of Technical Support via phone and email, Lifetime Technical Support through online chat and Lifetime Next Business Day hardware replacement

12 slots for port expansion cards:			**APM408C** (8 ports) **APM408P** (8 ports PoE+)*	**APM408F** (8 ports)	**APM402XL** (2 ports)				
			* Only first 6 slots are delivering PoE power to APM408P cards for 48 PoE+ ports per switch. APS1200W PSU is preferred for PoE applications.						
M4300-96X online configurator: www.netgear.com/96x-config			110V/220V AC	34W (min) 232W (max) PoE Budget with 1 x APS600W PSU, or 1+1 redundant*		110V/220V AC	1,440W (min/max) PoE Budget with 2 x APS1200W PSUs in shared mode*		
			110V/220V AC	634W (min) 832W (max) PoE Budget with 2 x APS600W PSUs in shared mode		110V AC	1,084W (min) 1,282W (max) PoE Budget with APS600W+APS1200W PSUs in shared mode		
			110V AC	484W (min) 682W (max) PoE Budget with 1 x APS1200W PSU, or 1+1 redundant		220V AC	1,234W (min) 1,432W (max) PoE Budget with APS600W+APS1200W PSUs in shared mode		
			220V AC	634W (min) 832W (max) PoE Budget with 1 x APS1200W PSU, or 1+1 redundant					
						Empty switch version, no PSU (PSU must be purchased separately)			**XSM4396K0**
						Starter Kit with the switch, 48 x SFP+ (6 x APM408F) and 1 PSU APS600W			**XSM4396K1**

* PoE Budget depends on number of PSU and APM port cards per switch. Min values above are guaranteed when 6xAPM408P (48x10G PoE+) plus any combination of 6 other port cards. Max values are guaranteed when only 6xAPM408P (48x10G PoE+) per switch, or less. APS600W provides 600W@110V/220VAC; APS1200W delivers 1,050W@110VAC or 1,200W@220VAC per PSU. The system consumes 110W, plus 5W per empty slot. APM408C/APM408P consume 38W per port card. APM408F/APM402XL consume 23W per port card.

Intelligent Edge Managed Switches

Data Sheet

M4300 series

Product Brief

The M4300 Stackable L3 Managed Switch Series comes with 40G, 10G and 1G models in a variety of form factors including PoE+ full provisioning. M4300 Switch Series delivers IPv4/IPv6 rich services for mid-enterprise edge and SMB core with mixed stacking between 40-, 10- and 1-Gigabit models. Layer 3 feature set includes static and policy-based routing, RIP, VRRP, OSPF, and PIM dynamic routing. M4300 is ideal for server aggregation, wireless access, unified communications and Video-over-IP.

NETGEAR M4300 series key features:

- Cost effective 1G access layer in campus LAN networks, and high performance 10G/40G distribution layer for midsize organizations networks
- Zero Touch AV-over-IP with pre-configured L2 Multicast (SDVoE-ready)
- Advanced Layer 2, Layer 3 and Layer 4 feature set - no license required - including Policy Based Routing, RIP, VRRP, OSPF and PIM
- Innovative mixed "Spine and Leaf", 1G, 10G and 40G stacking with nonstop forwarding (NSF) and hitless failover redundancy
- Low acoustics, half-width 16-port and 24-port 10G models can be paired in a single rack space for redundant Top of Rack
- Modular 12-slot 2RU model scaling up to 96-port 10G by multiple of 8 ports or 24-port 40G by multiple of 2 ports
- Up to 768 (10 Gigabit) ports, 192 (40 Gigabit) ports or 384 (1 Gigabit) ports, or a combination in a single logical switch
- PoE+ (30 watts per port) with hot swap, redundant power supplies and full provisioning

NETGEAR M4300 series software features:

- Advanced classifier-based, time-based hardware implementation for L2 (MAC), L3 (IP) and L4 (UDP/TCP transport ports) security and prioritization
- Selectable Port-Channel / LAG (802.3ad - 802.1AX) L2/L3/L4 hashing for fault tolerance and load sharing with any type of Ethernet channeling
- Voice VLAN with SIP, H323 and SCCP protocols detection and LLDP-MED IP phones automatic QoS and VLAN configuration
- Efficient authentication tiering with successive DOT1X, MAB and Captive Portal methods for streamlined BYOD
- Comprehensive IPv4/IPv6 static and dynamic routing including Proxy ARP, OSPF, Policy-based routing and automatic 6-to-4 tunneling
- Scalable Pro AV deployments with IGMP+ automatic L2 multicast (only subscribed videos flow from one switch to the other across the L2 topology)
- High performance IPv4/IPv6 multicast routing with PIM timer accuracy and unhandled PIM (S,G,rpt) state machine events transitioning
- Advanced IPv4/IPv6 security implementation including malicious code detection, DHCP Snooping, IP Source Guard protection and DoS attacks mitigation
- Innovative multi-vendor Auto-iSCSI capabilities for easier virtualization optimization

NETGEAR M4300 series resiliency and availability features:

- Dual redundant, modular power supplies equipping full width models contribute to business continuity management
- Vertical or horizontal flexible stacking with management unit hitless failover and nonstop forwarding (NSF) across operational stack members
- Spine and leaf architecture with every leaf switch (1G access switches) connecting to every spine switch (distributed 10G "core" switches)
- Stacking and distributed link aggregation allow for multi-resiliency with zero downtime and load balancing capabilities
- Link Dependency new feature enables or disables ports based on the link state of different ports
- Per VLAN Spanning Tree and Per VLAN Rapid Spanning Tree (PVSTP/PVRSTP) offer interoperability with PVST+ infrastructures

NETGEAR M4300 series management features:

- DHCP/BootP innovative auto-installation including firmware and configuration file upload automation
- Industry standard SNMP, RMON, MIB, LLDP, AAA, sFlow, RSPAN and PTPv2 1-step transparent clock implementation (select M4300 models)
- Service port for out-of-band Ethernet management (OOB)
- Standard RS232 straight-through serial RJ45 and Mini-USB ports for local management console
- Standard USB port for local storage, logs, configuration or image files
- Dual firmware image for updates with minimum service interruption
- Industry standard command line interface (CLI) for IT admins used to other vendors commands
- Fully functional Web console (GUI) for IT admins who prefer an easy to use graphical interface
- Single-pane-of-glass NMS300 management platform with mass-configuration support

NETGEAR M4300 series warranty and support:

- NETGEAR ProSAFE Limited Lifetime Hardware Warranty**
- Included Lifetime Technical Support
- Included Lifetime Next Business Day Hardware Replacement

Modern access layer features highlights

High Density Layer 2/Layer 3/Layer 4 Stackable Switch Solution	
M4300 switch series supports Nonstop Forwarding (NSF) virtual chassis stacking with up to 8 switches in a single logical switch, with hitless management failover	• Any 40G or 10G port (copper, fiber) and any media type (RJ45, SFP+, DAC) can be used for any M4300 models • Hot-swappable stacking of up to 8 units, vertical or horizontal • 40G and 10G models can stack with 1G models in legacy dual ring topologies, or innovative sp topologies • L2, L3 and L4 switching features (access control list, classification, filtering, IPv4/IPv6 tion services) are performed in hardware at interface line rate for voice, video, and da
M4300 series Layer 3 software package provides advanced IPv4/IPv6 fault tolerant routing capabilities for interfaces, VLANs, subnets and multi	
Example of single or dual ring topology: 10G links (Copper, Fiber) 1G models: up to (4) 10G ports per switch can be used for stacking (depending on inter-switch links oversubscription requirements)	Example of spine and leaf topology:  10G/40G models: up to (16) 40G or 10G ports per switch can be used for stacking (again, depending on oversubscription requirements between switches)
Best value switching performance:	
96p 10G models: 256K MAC address table, 4K concurrent VLANs and 12K Layer 3 route table size for the most demanding enterprise or campus networks	
48p 10G models: 128K MAC address table and same other constants as 96p 10G models	
All other models: 16K MAC address table, 4K concurrent VLANs and 512 Layer 3 route table size for typical midsize environnements	
Mixed stacking between more capable and less capable devices uses SDM template based on "least commom denominator" set of capacities and capabilities	
Each switch provides line-rate local switching and routing capacity	
80 PLUS certified power supplies for energy high efficiency	
Full width models come with two PSU bays: a second PSU (sold separately) will add 1+1 power redundancy	
Increased packet buffering with up to 96Mb (96p 10G models), 72 Mb (48p 10G models), 32 Mb (24p 10G models) and 16 Mb (all other models)	
Low latency at all network speeds, including 40 Gigabit and 10 Gigabit copper / fiber interfaces	
Jumbo frames support of up to 9Kb accelerating storage performance for backup and cloud applications	
iSCSI Flow Acceleration and Automatic Protection/QoS for virtualization and server room networks containing iSCSI initiators and iSCSI targets	• Detecting the establishment and termination of iSCSI sessions and connections by snooping packets used in the iSCSI protocol • Maintaining a database of currently active iSCSI sessions and connections to store data, including classifier rules for desired QoS treatment • Installing and removing classifier rule sets as needed for the iSCSI session traffic • Monitoring activity in the iSCSI sessions to allow for aging out session entries if the session termination packets are not received • Avoiding session interruptions during times of congestion that would otherwise cause iSCSI packets to be dropped

Tier 1 availability	
Virtual Chassis Stacking technology upsurges overall network availability, providing both better resiliency in network architectures, and better performance with advanced load balancing capabilities between network uplinks	• Up to (8) M4300 switches can be aggregated using a virtual back plane and a single console or web management interface • There is no 10G or 40G port pre-configured as Stacking port: all 10G or 40G ports are configured in Ethernet mode by default – Port configuration can be changed to Stack mode in Web GUI (System/ Stacking/Advanced/Stack-port Configuration) – Or using CLI command << #stack-port unit/slot/port stack >> in Stack Global Configuration section • Other devices in the network see the stack as a single bridge or a single router • Within the stack, a switch is elected (or chosen based on priority settings) as the "management unit" responsible for the stack members' routing tables • Another switch is designated (or chosen based on priority settings) as an alternate, backup management unit • In typical spine and leaf architectures, 10G / 40G "spine" switches are meant to handle management unit and backup management unit roles • The Non-Stop Forwarding (NSF) feature enables the stack to secure forwarding end-user traffic when the management unit fails • Non-Stop Forwarding is supported for the following events: – Power failure of the management unit – Other hardware failure causing the management unit to hang or to reset – Software failure causing the management unit to hang or to reset – Failover initiated by the administrator – Loss of cascade connectivity between the management unit and the backup unit • As the backup management unit takes over, end-user data streams may lose a few packets, but do not lose their IP sessions, such as VoIP calls • Instant failover from management unit to redundant management unit is hitless for world-class resiliency and availability • Back to normal production conditions, hitless failback requires a command in CLI or in GUI, for more control
Adding a second PSU to full width models enables redundant 1+1 power protection and contributes to business continuity management	
Distributed Link Aggregation, also called Port Channeling or Port Trunking, offers powerful network redundancy and load balancing between stacked members	• Servers and other network devices benefit from greater bandwidth capacity with active-active teaming (LACP—link aggregation control protocol) • From a system perspective, a LAG (Link Aggregation Group) is treated as a physical port by M4300 stack for even more simplicity
Rapid Spanning Tree (RSTP) and Multiple Spanning Tree (MSTP) allow for rapid transitionning of the ports to the Forwarding state and the suppression of Topology Change Notification	
NETGEAR PVSTP implementation (CLI only) follows the same rules than other vendor's Per VLAN STP for strict interoperability	• Including industry-standard PVST+ interoperability • PVSTP is similar to the MSTP protocol as defined by IEEE 802.1s, the main difference being PVSTP runs one instance per VLAN • In other words, each configured VLAN runs an independent instance of PVSTP • FastUplink feature immediately moves an alternate port with lowest cost to forwarding state when the root port goes down to reduce recovery time • FastBackbone feature selects new indirect port when an indirect port fails
NETGEAR PVRSTP implementation (CLI only) follows the same rules than other vendor's Per VLAN RSTP for strict interoperability	• Including industry-standard RPVST+ interoperability • PVRSTP is similar to the RSTP protocol as defined by IEEE 802.1w, the main difference being PVRSTP runs one instance per VLAN • In other words, each configured VLAN runs an independent instance of PVRSTP • Each PVRSTP instance elects a root bridge independent of the other • Hence there are as many Root Bridges in the region as there are VLANs configured • Per VLAN RSTP has in built support for FastUplink and FastBackbone
IP address conflict detection performed by embedded DHCP servers prevents accidental IP address duplicates from perturbing the overall network stability	

IP Event Dampening reduces the effect of interface flaps on routing protocols: the routing protocols temporarily disable their processing (on the unstable interface) until the interface becomes stable, thereby greatly increasing the overall stability of the network	
Ease of deployment	
Automatic configuration with DHCP and BootP Auto Install eases large deployments with a scalable configuration files management capability, mapping IP addresses and host names and providing individual configuration files to multiple switches as soon as they are initialized on the network	
Both the Switch Serial Number and Switch primary MAC address are reported by a simple "show" command in the CLI - facilitating discovery and remote configuration operations	
M4300 DHCP L2 Relay agents eliminate the need to have a DHCP server on each physical network or subnet	• DHCP Relay agents process DHCP messages and generate new DHCP messages • Supports DHCP Relay Option 82 circuit-id and remote-id for VLANs • DHCP Relay agents are typically IP routing-aware devices and can be referred to as Layer 3 relay agents
Automatic Voice over IP prioritization with Auto-VoIP simplifies most complex multi-vendor IP telephones deployments either based on protocols (SIP, H323 and SCCP) or on OUI bytes (default database and user-based OUIs) in the phone source MAC address; providing the best class of service to VoIP streams (both data and signaling) over other ordinary traffic by classifying traffic, and enabling correct egress queue configuration	
An associated Voice VLAN can be easily configured with Auto-VoIP for further traffic isolation	
When deployed IP phones are LLDP-MED compliant, the Voice VLAN will use LLDP-MED to pass on the VLAN ID, 802.1P priority and DSCP values to the IP phones, accelerating convergent deployments	
Versatile connectivity	
24- and 48-port 1G models with 10G uplinks, including 2-port 10GBASE-T and 2-port 10GBASE-X SFP+	
IEEE 802.3at Power over Ethernet Plus (PoE+) provides up to 30W power per port using 2 pairs while offering backward compatilibity with 802.3af	• IEEE 802.3at Layer 2 LLDP method and 802.3at PoE+ 2-event classification method fully supported for compatibility with most PoE+ PD devices
16-, 24-, 48- and 96-port 10G models with a variety of 10GBASE-T and 10GBASE-X SFP+ interfaces	
M4300-96X offers 12 slots for 8x10G or 2x40G port expansion cards and hundreds of combinations	
Large 10 Gigabit choice with SFP+ ports for fiber or short, low-latency copper DAC cables; 10GBASE-T ports for legacy Cat6 RJ45 short connexions (up to 55m) and Cat6A / Cat7 connections up to 100m	
Automatic MDIX and Auto-negotiation on all ports select the right transmission modes (half or full duplex) as well as data transmission for crossover or straight-through cables dynamically for the admin	
1G models (M4300-28G and M4300-52G, PoE+ versions included): the 10 Mbps / Half Duplex mode isn't supported on ports 17-24 and 41-48	
Link Dependency feature enables or disables one or more ports based on the link state of one or more different ports	
IPv6 full support with IPv6 host, dual stack (IPv4 and IPv6), multicasting (MLD for IPv6 filtering and PIM-SM / PIM-DM for IPv6 routing), ACLs and QoS, static routing and dynamic routing (OSPFv3) as well as Configured 6to4 and Automatic 6to4 tunneling for IPv6 traffic encapsulation into IPv4 packets	
Ease of management and granular control	
Dual firmware image and dual configuration file for transparent firmware updates / configuration changes with minimum service interruption	
Flexible Port-Channel/LAG (802.3ad - 802.1AX) implementation for maximum compatibility, fault tolerance and load sharing with any type of Ethernet channeling from other vendors switch, server or storage devices conforming to IEEE 802.3ad - including static (selectable hashing algorithms) - or to IEEE 802.1AX with dynamic LAGs or port-channel (highly tunable LACP Link Aggregation Control Protocol)	
LACP mode automatically reverts to and from Static LAG, useful when the host isn't LACP anymore, for instance during a factory reset or re-configuration	
Unidirectional Link Detection Protocol (UDLD) and Aggressive UDLD detect and avoid unidirectional links automatically, in order to prevent forwarding anomalies in a Layer 2 communication channel in which a bi-directional link stops passing traffic in one direction	
Port names feature allows for descriptive names on all interfaces and better clarity in real word admin daily tasks	
SDM (System Data Management, or switch database) templates allow for granular system resources distribution depending on IPv4 or IPv6 applications	• ARP Entries (the maximum number of entries in the IPv4 Address Resolution Protocol ARP cache for routing interfaces) • IPv4 Unicast Routes (the maximum number of IPv4 unicast forwarding table entries) • IPv6 NDP Entries (the maximum number of IPv6 Neighbor Discovery Protocol NDP cache entries) • IPv6 Unicast Routes (the maximum number of IPv6 unicast forwarding table entries) • ECMP Next Hops (the maximum number of next hops that can be installed in the IPv4 and IPv6 unicast forwarding tables) • IPv4 Multicast Routes (the maximum number of IPv4 multicast forwarding table entries) • IPv6 Multicast Routes (the maximum number of IPv6 multicast forwarding table entries)

Loopback interfaces management for routing protocols administration	
Private VLANs and local Proxy ARP help reduce broadcast with added security	
Management VLAN ID is user selectable for best convenience	
Industry-standard VLAN management in the command line interface (CLI) for all common operations such as VLAN creation; VLAN names; VLAN "make static" for dynamically created VLAN by GVRP registration; VLAN trunking; VLAN participation as well as VLAN ID (PVID) and VLAN tagging for one interface, a group of interfaces or all interfaces at once	
Simplified VLAN configuration with industry-standard Access Ports for 802.1Q unaware endpoints and Trunk Ports for switch-to-switch links with Native VLAN	
System defaults automatically set per-port broadcast, multicast, and unicast storm control for typical, robust protection against DoS attacks and faulty clients which can, with BYOD, often create network and performance issues	
IP Telephony administration is simplified with consistent Voice VLAN capabilities per the industry standards and automatic functions associated	
Comprehensive set of "system utilities" and "Clear" commands help troubleshoot connectivity issues and restore various configurations to their factory defaults for maximum admin efficiency: traceroute (to discover the routes that packets actually take when traveling on a hop-by-hop basis and with a synchronous response when initiated from the CLI), clear dynamically learned MAC addresses, counters, IGMP snooping table entries from the Multicast forwarding database etc…	
Syslog and Packet Captures can be sent to USB storage for rapid network troubleshooting	
Replaceable factory-default configuration file for predictable network reset in distributed branch offices without IT personnel	
All major centralized software distribution platforms are supported for central software upgrades and configuration files management (HTTP, TFTP), including in highly secured versions (HTTPS, SFTP, SCP)	
Simple Network Time Protocol (SNTP) can be used to synchronize network resources and for adaptation of NTP, and can provide synchronized network timestamp either in broadcast or unicast mode (SNTP client implemented over UDP - port 123)	
Embedded RMON (4 groups) and sFlow agents permit external network traffic analysis	
Engineered for convergence and AV-over-IP	
Audio (Voice over IP) and Video (multicasting) comprehensive switching, filtering, routing and prioritization	
Auto-VoIP, Voice VLAN and LLDP-MED support for IP phones QoS and VLAN configuration	
IEEE 1588 (section 10 and 11.5) PTPv2 Transparent Clock (TC) End-to-End implementation considering the residence time of PTPv2 packets from ingress to egress	• The 48-port 10G M4300 models (M4300-24X24F, M4300-48X, M4300-48XF) don't support PTP due to hardware limitation • For all other models: 1-step Transparent Clock mode, using the residence time of the PPTPv2 packet at the egress port level • The "Sync & Delay_Req" field of passing/egressing out PTPv2 packets is updated with the residence time in the switch • Other fields in PTPv2 packets ("Announce", "Delay_Resp", "Pdelay_Req" and "Pdelay_Resp") are not updated
IGMP+ enhanced implementation for automatic multicast across a M4300 / M4500 L2 network (Spine and Leaf topologies), removing the need for L3 PIM routing	• IGMP+ is pre-configured on default VLAN 1 out of the box in all M4300 and M4500 models (M4300: starting 12.0.8.x release) • IGMP+ can be configured on another VLAN for automatic IGMP across switches on that VLAN (uplinks can make part of that VLAN in trunk mode) • IGMP+ allow AV-over-IP devices (TX/Encoders and RX/Decoders) to be connected across multiple M4300 and M4500 switches in a star topology • New show igmpsnooping group command in CLI and GUI displays the Source and Group IP addresses along with their corresponding MAC addresses that are learnt through IGMP Snooping in a given VLAN on a given interface
IGMP Snooping and Proxy for IPv4, MLD Snooping and Proxy for IPv6, and Querier mode facilitate fast receivers joins and leaves for multicast streams and ensure multicast traffic only reaches interested receivers everywhere in a Layer 2 or a Layer 3 network, including source-specific (SSM) and any-source (ASM) multicast	
Multicast VLAN Registration (MVR) uses a dedicated Multicast VLAN to forward multicast streams and avoid duplication for clients in different VLANs	
Distance Vector Multicast Routing Protocol (DVMRP) is a dense mode multicast protocol also called Broadcast and Prune Multicasting protocol	• DVMRP uses a distributed routing algorithm to build per-source-group multicast trees • DVMRP assumes that all hosts are part of a multicast group until it is informed of multicast group changes • It dynamically generates per-source-group multicast trees using Reverse Path Multicasting • Trees are calculated and updated dynamically to track membership of individual groups

Multicast routing (PIM-SM and PIM-DM, both IPv4 and IPv6) ensure multicast streams can reach receivers in different L3 subnets	• Multicast static routes allowed in Reverse Path Forwarding (RPF) selection • Multicast dynamic routing (PIM associated with OSPF) including PIM multi-hop RP support for routing around damage advanced capabilities • Full support of PIM (S,G,Rpt) state machine events as described in RFC 4601 • Improved Multicast PIM timer accuracy with hardware abstraction layer (HAPI) polling hit status for multicast entries in real time (without caching)
PoE power management and schedule enablement	
Power redundancy for higher availability when mission critical convergent installation, including hot-swap main PSU replacement without interruption	
Layer 3 routing package	
Static Routes/ECMP Static Routes for IPv4 and IPv6	• Static and default routes are configurable with next IP address hops to any given destination • Permitting additional routes creates several options for the network administrator • The admin can configure multiple next hops to a given destination, intending for the router to load share across the next hops • The admin distinguishes static routes by specifying a route preference value: a lower preference value is a more preferred static route • A less preferred static route is used if the more preferred static route is unusable (down link, or next hop cannot be resolved to a MAC address) • Preference option allows admin to control the preference of individual static routes relative to routes learned from other sources (such as OSPF) since a static route will be preferred over a dynamic route when routes from different sources have the same preference
Advanced Static Routing functions for administrative traffic control	• Static Reject Routes are configurable to control the traffic destined to a particular network so that it is not forwarded through the router • Such traffic is discarded and the ICMP destination unreachable message is sent back to the source • Static reject routes can be typically used to prevent routing loops • Default routes are configurable as a preference option
In order to facilitate VLAN creation and VLAN routing using Web GUI, a VLAN Routing Wizard offers following automated capabilities:	• Create a VLAN and generate a unique name for VLAN • Add selected ports to the newly created VLAN and remove selected ports from the default VLAN • Create a LAG, add selected ports to a LAG, then add this LAG to the newly created VLAN • Enable tagging on selected ports if the port is in another VLAN • Disable tagging if a selected port does not exist in another VLAN • Exclude ports that are not selected from the VLAN • Enable routing on the VLAN using the IP address and subnet mask entered as logical routing interface
DHCP Relay Agents relay DHCP requests from any routed interface, including VLANs, when DHCP server doesn't reside on the same IP network or subnet	• The agent relays requests from a subnet without a DHCP server to a server or next-hop agent on another subnet • Unlike a router which switches IP packets transparently, a DHCP relay agent processes DHCP messages and generates new DHCP messages • Supports DHCP Relay Option 82 circuit-id and remote-id for VLANs • Multiple Helper IPs feature allows to configure a DHCP relay agent with multiple DHCP server addresses per routing interface and to use different server addresses for client packets arriving on different interfaces on the relay agent server addresses for client packets arriving on different interfaces on the relay agent
Virtual Router Redundancy Protocol (VRRP) provides backup for any statically allocated next-hop router address going down, based on RFC 3768 (IPv4)	• VRRP is based on the concept of having more than one router recognize the same router IP address • VRRP increases the availability of the default path without requiring configuration of dynamic routing, or router discovery protocols on end stations • Multiple virtual routers can be defined on any single router interface • One of the routers is elected the master router and handles all traffic sent to the specified virtual router IP address • When the master router fails, one of the backup routers is elected in its place and starts handling traffic sent to the address

As an enhancement to RFC 3768, VRRP Interface can be configured as pingable to help troubleshoot network connectivity issues	• In that case, VRRP master responds to both fragmented and unfragmented ICMP echo requests packets destined to VRRP address(es) • VRRP master responds with VRRP address as the source IPv4 address and VRMAC as the source MAC address • A virtual router in backup state discards these ICMP echo requests
VRRP Route/Interface Tracking feature extends the capability of the Virtual Router Redundancy Protocol (VRRP)	• Allows tracking of specific route/interface IP states, within the router, that can alter the priority level of a virtual router for a VRRP group • It ensures the best VRRP router is master for the group
Router Discovery Protocol is an extension to ICMP and enables hosts to dynamically discover the IP address of routers on local IP subnets	• Based on RFC 1256 for IPv4 • Routers periodically send router discovery messages to announce their presence to locally-attached hosts • The router discovery message advertises one or more IP addresses on the router that hosts can use as their default gateway • Hosts can send a router solicitation message asking any router that receives the message to immediately send a router advertisement • Router discovery eliminates the need to manually configure a default gateway on each host • It enables hosts to switch to a different default gateway if one goes down
Loopback interfaces are available as dynamic, stable IP addresses for other devices on the network, and for routing protocols	
Tunnel interfaces are available for IPv4 and IPv6	• Each router interface (port, or VLAN interface) can have multiple associated tunnel interfaces • Support for Configured 6to4 (RFC 4213) and Automatic 6to4 tunneling (RFC 3056) for IPv6 traffic encapsulation into IPv4 packets • 6to4 tunnels are automatically formed for IPv4 tunnels carrying IPv6 traffic • M4300 can act as a 6to4 border router that connects a 6to4 site to a 6to4 domain
Support of Routing Information Protocol (RIPv2) as a distance vector protocol specified in RFC 2453 for IPv4	• Each route is characterized by the number of gateways, or hops, a packet must traverse to reach its intended destination • Categorized as an interior gateway protocol, RIP operates within the scope of an autonomous system
Route Redistribution feature enables the exchange of routing information among different routing protocols all operating within a router	• Configurable when different routing protocols use different ways of expressing the distance to a destination or different metrics and formats • For instance, when OSPF redistributes a route from RIP, and needs to know how to set each of the route's path attributes
Open Shortest Path First (OSPF) link-state protocol for IPv4 and IPv6	• For IPv4 networks, OSPF version 2 is supported in accordance with RFC 2328, including compatibility mode for the RFC 1583 older specification • For IPv6 networks, OSPF version 3 is fully supported • OSPF can operate within a hierarchy, the largest entity within the hierarchy is the autonomous system (AS) • An AS is a collection of networks under a common administration sharing a common routing strategy (routing domain) • An AS can be divided into a number of areas or groups of contiguous networks and attached hosts • Two different types of OSPF routing occur as a result of area partitioning: Intra-area and Inter-area • Intra-area routing occurs if a source and destination are in the same area • Inter-area routing occurs when a source and destination are in different areas • An OSPF backbone distributes information between areas

Advanced OSPF implementation for large routing domains	• OSPF NSSA feature supports RFC 3101, The OSPF Not-So-Stubby Area (NSSA) Option • Forwarding of OSPF Opaque LSAs is enabled by default • Passive interface feature can disable sending OSPF routing updates on an interface • Static Area Range Costs feature allows to configure a fixed OSPF cost that is always advertised when an area range is active • OSPF Equal Cost Multipath (ECMP) feature allows to forward traffic through multiple paths, taking advantage of more bandwidth • ECMP routes can be learned dynamically, or configured statically with multiple static routes to same destination but with different next hops • OSPF Max Metric feature allows to to override the metric in summary type 3 and type 4 LSAs while in stub router mode • Automatic Exiting of Stub Router Mode feature allows to exit stub router mode, reoriginating the router LSA with proper metric values on transit links • Static Area Range Costs feature allows to configure a fixed OSPF cost that is always advertised when an area range is active
OSPF LSA Pacing feature improves the efficiency of LSA flooding, reducing or eliminating the packet drops caused by bursts in OSPF control packets	• LSA transmit pacing limits the rate of LS Update packets that OSPF can send • With LSA refresh groups, OSPF efficiently bundles LSAs into LS Update packets when periodically refreshing self-originated LSAs
OSPF Flood Blocking feature allows to disable LSA flooding on an interface with area or AS (domain-wide) scope	• In that case, OSPF does not advertise any LSAs with area or AS scope in its database description packets sent to neighbors
OSPF Transit-Only Network Hiding is supported based on RFC 6860 with transit-only network defined as a network connecting only routers	• Transit-only networks are usually configured with routable IP addresses which are advertised in LSAs but are not needed for data traffic • If router-to-router subnets are advertised, remote attacks can be launched against routers by sending packets to these transit-only networks • Hiding transit-only networks speeds up network convergence and reduces vulnerability to remote attacks • 'Hiding' implies that the prefixes are not installed in the routing tables on OSPFv2 and OSPFv3 routers
IP Multinetting allows to configure more than one IP address on a network interface (other vendors may call it IP Aliasing or Secondary Addressing)	
ICMP Throttling feature adds configuration options for the transmission of various types of ICMP messages	• ICMP Redirects can be used by a malicious sender to perform man-in-the-middle attacks, or divert packets to a malicious monitor, or to cause Denial of Service (DoS) by blackholing the packets • ICMP Echo Requests and other messages can be used to probe for vulnerable hosts or routers • Rate limiting ICMP error messages protects the local router and the network from sending a large number of messages that take CPU and bandwidth
The Policy Based Routing feature (PBR) overrides routing decision taken by the router and makes the packet to follow different actions based on a policy	• It provides freedom over packet routing/forwarding instead of leaving the control to standard routing protocols based on L3 • For instance, some organizations would like to dictate paths instead of following the paths shown by routing protocols • Network Managers/Administrators can set up policies such as: – My network will not carry traffic from the Engineering department – Traffic originating within my network with the following characteristics will take path A, while other traffic will take path B – When load sharing needs to be done for the incoming traffic across multiple paths based on packet entities in the incoming traffic
Enterprise security	
Traffic control MAC Filter and Port Security help restrict the traffic allowed into and out of specified ports or interfaces in the system in order to increase overall security and block MAC address flooding issues	
DHCP Snooping monitors DHCP traffic between DHCP clients and DHCP servers to filter harmful DHCP message and builds a bindings database of (MAC address, IP address, VLAN ID, port) tuples that are considered authorized in order to prevent DHCP server spoofing attacks	
IP source guard and Dynamic ARP Inspection use the DHCP snooping bindings database per port and per VLAN to drop incoming packets that do not match any binding and to enforce source IP/MAC addresses for malicious users traffic elimination	

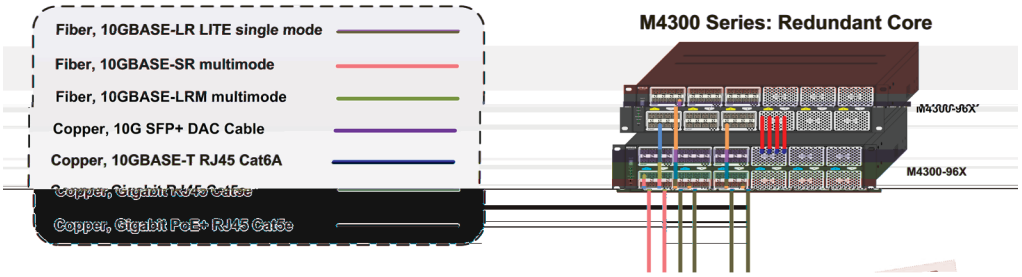
Time-based Layer 2 / Layer 3-v4 / Layer 3-v6 / Layer 4 Access Control Lists (ACLs) can be binded to ports, Layer 2 interfaces, VLANs and LAGs (Link Aggregation Groups or Port channel) for fast unauthorized data prevention and right granularity	
For in-band switch management, management ACLs on CPU interface (Control Plane ACLs) are used to define the IP/MAC or protocol through which management access is allowed for increased HTTP/HTTPS or Telnet/SSH management security	
Out-of-band management is available via dedicated service port (1G RJ45 OOB) when in-band management can be prohibited via management ACLs	
Bridge protocol data unit (BPDU) Guard allows the network administrator to enforce the Spanning Tree (STP) domain borders and keep the active topology consistent and predictable - unauthorized devices or switches behind the edge ports that have BPDU enabled will not be able to influence the overall STP by creating loops	
Spanning Tree Root Guard (STRG) enforces the Layer 2 network topology by preventing rogue root bridges potential issues when for instance, unauthorized or unexpected new equipment in the network may accidentally become a root bridge for a given VLAN	
Dynamic 802.1x VLAN assignment mode, including Dynamic VLAN creation mode and Guest VLAN / Unauthenticated VLAN are supported for rigorous user and equipment RADIUS policy server enforcement	• Up to 48 clients (802.1x) per port are supported, including the authentication of the users domain, in order to facilitate convergent deployments. For instance when IP phones connect PCs on their bridge, IP phones and PCs can authenticate on the same switch port but under different VLAN assignment policies (Voice VLAN versus other Production VLANs)
802.1x MAC Address Authentication Bypass (MAB) is a supplemental authentication mechanism that lets non-802.1x devices bypass the traditional 802.1x process altogether, letting them authenticate to the network using their client MAC address as an identifier	• A list of authorized MAC addresses of client NICs is maintained on the RADIUS server for MAB purpose • MAB can be configured on a per-port basis on the switch • MAB initiates after unsuccessful dot1x authentication process (configurable time out), when clients don't respond to any of EAPOL packets • When 802.1X unaware clients try to connect, the switch sends the MAC address of each client to the authentication server • The RADIUS server checks the MAC address of the client NIC against the list of authorized addresses • The RADIUS server returns the access policy and VLAN assignment to the switch for each client
With Successive Tiering, the Authentication Manager allows for authentication methods per port for a Tiered Authentication based on configured time-outs	• By default, configuration authentication methods are tried in this order: Dot1x, then MAB, then Captive Portal (web authentication) • With BYOD, such Tiered Authentication is powerful and simple to implement with strict policies – For instance, when a client is connecting, M4300 tries to authenticate the user/client using the three methods above, the one after the other • The admin can restrict the configuration such that no other method is allowed to follow the captive portal method, for instance
Double VLANs (DVLAN) pass traffic from one customer domain to another through the "metro core" in a multi-tenancy environment: customer VLAN IDs are preserved and a service provider VLAN ID is added to the traffic so the traffic can pass the metro core in a simple, secure manner	
Private VLANs (with Primary VLAN, Isolated VLAN, Community VLAN, Promiscuous port, Host port, Trunks) provide Layer 2 isolation between ports that share the same broadcast domain, allowing a VLAN broadcast domain to be partitioned into smaller point-to-multipoint subdomains accross switches in the same Layer 2 network	• Private VLANs are useful in DMZ when servers are not supposed to communicate with each other but need to communicate with a router • They remove the need for more complex port-based VLANs with respective IP interface/subnets and associated L3 routing • Another Private VLANs typical application are carrier-class deployments when users shouldn't see, snoop or attack other users' traffic
SSL version 3 and TLS version 2 ensure Web GUI sessions are secured	
Secure Shell (SSH version 2) and SNMPv3 (with or without MD5 or SHA authentication) ensure SNMP and Telnet sessions are secured	
2048-bit RSA key pairs, SHA2-256 and SHA2-512 cryptographic hash functions for SSLv3 and SSHv2 are supported on all M4300 models	
TACACS+ and RADIUS enhanced administrator management provides strict "Login" and "Enable" authentication enforcement for the switch configuration, based on latest industry standards: exec authorization using TACACS+ or RADIUS; command authorization using TACACS+ and RADIUS Server; user exec accounting for HTTP and HTTPS using TACACS+ or RADIUS; and authentication based on user domain in addition to user ID and password	
Superior quality of service	
Advanced classifier-based hardware implementation for Layer 2 (MAC), Layer 3 (IP) and Layer 4 (UDP/TCP transport ports) prioritization	
8 queues (7 in a stack) for priorities and various QoS policies based on 802.1p (CoS) and DiffServ can be applied to interfaces and VLANs	
Advanced rate limiting down to 1 Kbps granularity and mininum-guaranteed bandwidth can be associated with ACLs for best granularity	
Single Rate Policing feature enables support for Single Rate Policer as defined by RFC 2697	• Committed Information Rate (average allowable rate for the class) • Committed Burst Size (maximum amount of contiguous packets for the class) • Excessive Burst Size (additional burst size for the class with credits refill at a slower rate than committed burst size) • DiffServ feature applied to class maps
Automatic Voice over IP prioritization with protocol-based (SIP, H323 and SCCP) or OUI-based Auto-VoIP up to 144 simultaneous voice calls	
iSCSI Flow Acceleration and automatic protection / QoS with Auto-iSCSI	

Flow Control	
802.3x Flow Control implementation per IEEE 802.3 Annex 31B specifications with Symmetric flow control, Asymmetric flow control or No flow control	• Asymmetric flow control allows the switch to respond to received PAUSE frames, but the ports cannot generate PAUSE frames • Symmetric flow control allows the switch to both respond to, and generate MAC control PAUSE frames
Allows traffic from one device to be throttled for a specified period of time: a device that wishes to inhibit transmission of data frames from another device on the LAN transmits a PAUSE frame	• A device that wishes to inhibit transmission of data frames from another device on the LAN transmits a PAUSE frame
The Priority Flow Control (PFC) is standardized by the IEEE 802.1Qbb specification and enables flow control per traffic class on IEEE 802 full-duplex links	• By pausing congested priorities independently, highly loss sensitive protocols can share the same link with traffic that has different loss tolerances • The priorities are differentiated by the priority field of the 802.1Q VLAN header • PFC uses a new control packet defined in 802.1Qbb and therefore disables 802.3x standard flow control on PFC configured interfaces • PFC comes with CLI configuration and it is only supported on M4300-12X12F, 24X, 24X24F, 48X and 96X models
UDLD Support	
UDLD implementation detects unidirectional links physical ports (UDLD must be enabled on both sides of the link in order to detect an unidirectional link)	• UDLD protocol operates by exchanging packets containing information about neighboring devices • The purpose is to detect and avoid unidirectional link forwarding anomalies in a Layer 2 communication channel
Both "normal-mode" and "aggressive-mode" are supported for perfect compatibility with other vendors implementations, including port "D-Disable" triggering cases in both modes	

Target Application (IT)

Building 1

- For midsize server installations, two half-width M4300 10GbE models can be paired in a single rack space for redundant top-of-rack
- Compared with single top-of-rack switch installation, such two-unit horizontal stacking is cost-effective yet highly efficient for HA
- Management unit hitless failover and nonstop forwarding ensure no single point of failure for servers and storage



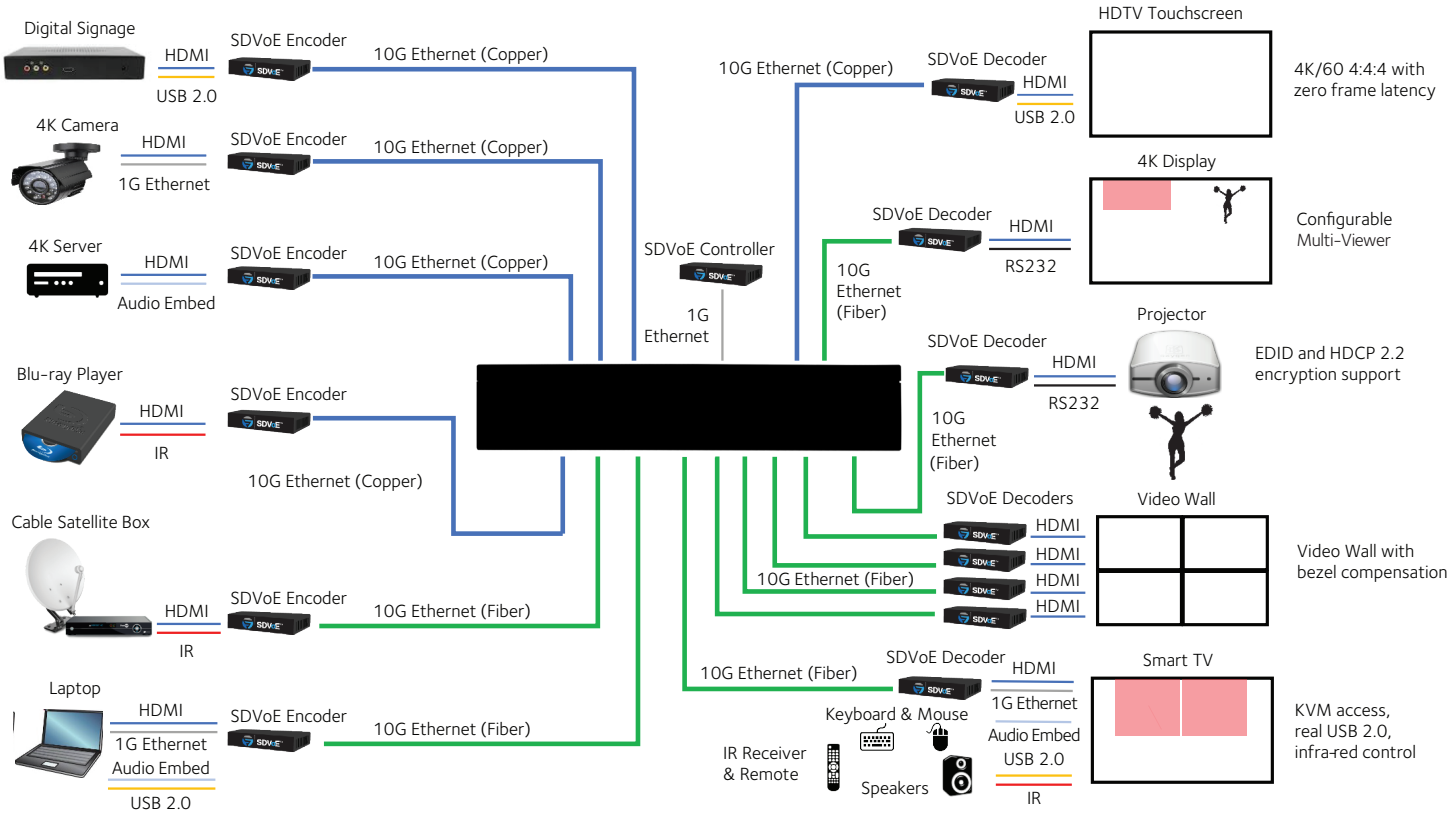
Building 2

- Common for intermediate distribution frames (IDF) in K-12 and other large campuses, stacking topologies greatly simplify deployments at the edge
- While reducing the number of logical units to manage, stacking also brings network resiliency with distributed uplinks in aggregation to the core
- Management unit hitless failover and nonstop forwarding ensures continuous uptime for clients across the stack

Building 3

- For typical collapsed core installations, with a variety of 1G and 10G access ports in branch offices, server rooms or campus high performance labs
- M4300 10G models can stack with M4300 1G models, enabling innovative “spine and leaf” topologies
- Spine and leaf architectures deliver highest performance with every leaf switch (1G) connecting to every spine switch (10G) for a fully non-blocking deployment
- With management unit hitless failover and nonstop forwarding, leaf switches keep forwarding L2 and L3 traffic in and out, while backup spine unit guarantees connectivity to the core

Target Application (SDVoE)



To take the complexity out of your AV-over-IP deployment, NETGEAR created M4300 switches that are preconfigured for easy, true AV and multi-cast Zero Touch network configuration. Namely, IGMP Snooping, IGMP Fast Leave, IGMP Querier are already enabled for the default VLAN 1 that all your devices will automatically use. Connect your encoder and decoder devices, and power on the switch – it just works!

Enabling Zero-Touch install of SDVoE Video-over-IP

- M4300-96X streamlines AV-over-IP SDVoE solutions, replacing 48x48 switchers and any other in/out distribution
  - Non-blocking fabric for 96x10G or 24x40G or a combination
  - 12 empty slots in 2RU for 8x10G or 2x40G port expansion cards
- Use the M4300-96X online configurator to design your modular switch
  - www.netgear.com/96x-config
- Plug and play and ready to grow as per your requirements
- Takes the complexity out of your AV-over-IP deployment
- Zero Touch AV-over-IP with pre-configured L2 Multicast (SDVoE-ready)
  - IGMP Snooping, IGMP Fast Leave, IGMP Querier are already enabled
- Easy-to-use Web browser-based management GUI

The SDVoE Alliance is an eco-system of companies in and around the AV-over-IP space, working together to create a platform for the next generation of audiovisual applications. NETGEAR SDVoE Partners provide the SDVoE audio-video products and NETGEAR provides the backbone network that makes it all possible.

Components and Modules

M4300-8X8F
Stackable Managed Switch

Ordering information

- Americas, Europe: XSM4316S-100NES
- Asia Pacific: XSM4316S-100AJS
- Warranty: Limited Lifetime ProSafe Hardware Warranty**

- 8-port 10GBASE-T (RJ45) all independent
- 8-port 10GBASE-X (SFP+) all independent
- 320Gbps non-blocking fabric across 16 ports
- Out-of-band 1G Ethernet management port
- Mini-USB and RJ45 RS232 console ports and USB storage port
- Full L3 feature set and non-stop forwarding (NSF) stacking
- Half-width form factor with one- and two-unit rack mount kit
- Two half-width switches can be installed in a single rack space for redundant top-of-rack
- Ships with one modular APS250W PSU in its power supply slot
- Low acoustics (36.9dB @25°C / 77°F), or fans off

To install a single half-width switch in a rack, a 19-inch rack-mount kit is supplied with the switch:

To install two half-width switches in a rack, inside and outside middle mounts and rack-mount brackets are supplied with the switches:

- (XSM4316PA) Ships with one modular APS299W PSU in its power supply slot
- (XSM4316PB) Ships with one modular APS600W PSU in its power supply slot
- Low acoustics (36dB with APS299W, 35dB with APS600W, @25°C / 77°F)

Components and Modules

M4300-24X
Stackable Managed Switch

Ordering information

- Americas, Europe: XSM4324CS-100NES
- Asia Pacific: XSM4324CS-100AJS
- Warranty: Limited Lifetime ProSafe Hardware Warranty**

- 24-port 10GBASE-T (RJ45)
- 4-port 10GBASE-X (SFP+) (shared, back)
- 480Gbps non-blocking fabric across 24 ports
- Out-of-band 1G Ethernet management port
- Mini-USB and RJ45 RS232 console ports and USB storage port
- Full L3 feature set and non-stop forwarding (NSF) stacking
- Half-width form factor with one- and two-unit rack mount kit
- Two half-width switches can be installed in a single rack space for redundant top-of-rack
- Ships with one modular APS250W PSU in its power supply slot
- Low acoustics (37dB @25°C / 77°F)

M4300-24XF
Stackable Managed Switch

Ordering information

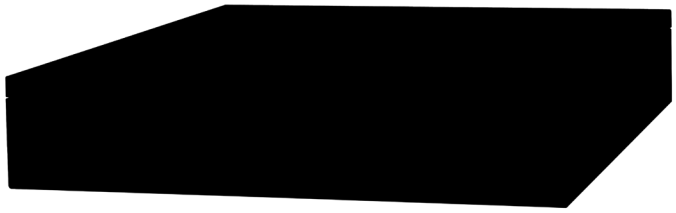
- Worldwide (40G Fiber card): APM402XL-10000S
- Warranty: Limited Lifetime ProSafe Hardware Warranty**

Empty version (XSM4396K0)



- 1.92Tbps non-blocking fabric for 96-port 10G or 24-port 40G or a combination
  - 12 slots (front) available in 2RU for 8x10G or 2x40G port expansion cards
  - XSM4396K0 is the SKU for the M4300-96X empty switch (no PSU)
  - XSM4396K1 is the starter kit including 48xSFP+ and 1x600W PSU
- 4 port cards and hundreds of combinations
  - APM408C features 8-port 100M/1G/2.5G/5G/10GBASE-T (copper RJ45)
  - APM408P features 8-port 100M/1G/2.5G/5G/10GBASE-T with PoE+ (copper RJ45)
  - APM408F features 8-port 1G/10GBASE-X (fiber SFP+)
  - APM402XL features 2-port 40GBASE-X (QSFP+)
- PoE over 10G is supported up to 48 x 10G PoE+ 30W per system (first 6 slots)
- Out-of-band 1G Ethernet Management port
- Mini-USB and RJ45 RS232 console ports and USB storage port
- Full L3 feature set and non-stop forwarding (NSF) stacking
- Full width 2RU form factor with 2-post and 4-post rack mount kit
- Ships with blank covers in empty slots (front I/O; rear PSU)
- Low acoustics (35.8dB @25°C / 77°F) when no PoE
- 66.8dB @25°C / 77°F with Max PoE (1,440W)

Use the M4300-96X online configurator to design your modular switch:

Accessories

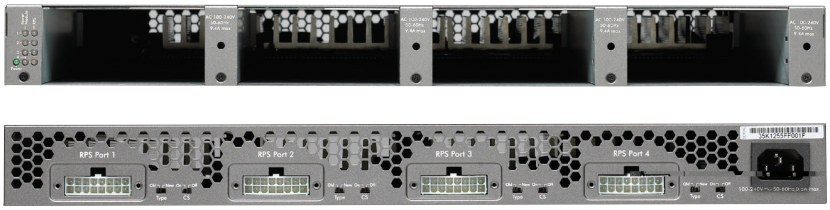
RPS4000v2
RPS unit for up to 4 concurrent switches

Ordering information

- Americas, Europe: RPS4000-200NES
- Asia Pacific: RPS4000-200AJS
- Warranty: 5 years

RPS mode: provide N+1 redundancy to M4300-52G-PoE+ when its two internal PSUs are used in EPS (shared) mode

- One APS1000W per M4300-52G-PoE+ connected to the RPS4000 unit
- Up to four (4) M4300-52G-PoE+ switches per RPS4000 unit



Front view

- RPS4000 is 1RU unit with four (4) empty slots

Rear view

- Four (4) embedded RPS connectors
- Switch selectors for RPS/EPS power modes

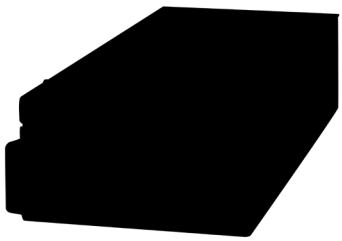
Included:

- Four (4) RPS cables - 60cm each (~2 ft)
- Rack mount kit

APS1200W
Power Supply Unit

Ordering information

- Americas, Europe: APS1200W-100NES
- Asia Pacific: APS1200W-100AJS
- Warranty: 5 years

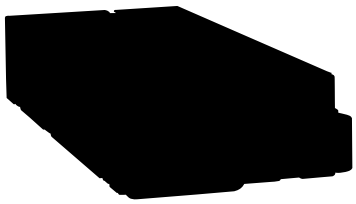


- Modular PSU for M4300-96X (PoE applications)
- C15 connector
- Capacity:
  - 110V-240V AC power input
  - Up to 1,050W output power at 110V AC
  - Up to 1,200W output power at 220V AC

APS1000W
Power Supply Unit

Ordering information

- Americas, Europe: APS1000W-100NES
- Asia Pacific: APS1000W-100AJS
- Warranty: 5 years



- Power module for RPS4000 unit
- Additionnal PSU for M4300-28G-PoE+ (GSM4328PB) and M4300-52G-PoE+ (GSM4352PB)
- C15 connector
- Capacity:
  - 110V-240V AC power input
  - Up to 640W output power at 110V AC
  - Up to 910W output power at 220V AC

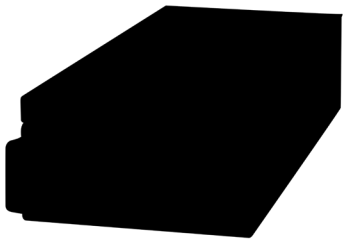
Accessories

APS600W
Power Supply Unit

Ordering information

- Americas, Europe: APS600W-100NES
- Asia Pacific: APS600W-100AJS

vWarranty: 5 years

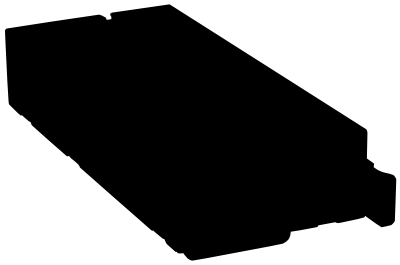


- Modular PSU for M4300-96X (non-PoE applications)
- Replacement PSU for M4300-16X (PoE applications)
- C14 connector
- Capacity:
  - 110V-240V AC power input
  - Up to 600W output power at 110/220V AC

APS550W
Power Supply Unit

Ordering information

- Americas, Europe: APS550W-100NES
- Asia Pacific: APS550W-100AJS
- Warranty: 5 years

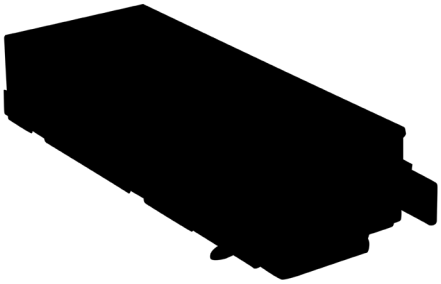


- Additional PSU for M4300-28G-PoE+ (GSM4328PA) and M4300-52G-PoE+ (GSM4352PA)
- C14 connector
- Capacity:
  - 110V-240V AC power input
  - Up to 575W output power at 110/220V AC

APS299W
Power Supply Unit

Ordering information

- Americas, Europe: APS299W-100NES
- Asia Pacific: APS299W-100AJS
- Warranty: 5 years



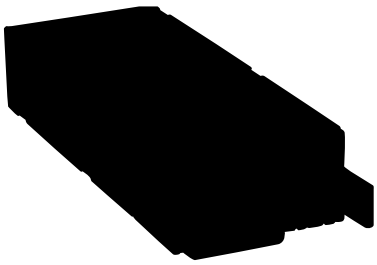
- Replacement PSU for M4300-16X (no or limited PoE applications)
- C14 connector
- Capacity:
  - 110V-240V AC power input
  - Up to 250W output power at 110/220V AC

Accessories

APS250W
Power Supply Unit

Ordering information

- Americas, Europe: APS250W-100NES
- Asia Pacific: APS250W-100AJS
- Warranty: 5 years

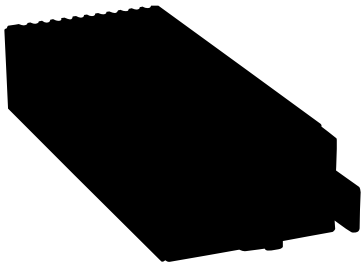


- Replacement PSU for M4300-8X8F, M4300-12X12F, M4300-24X, M4300-24XF
- Additional PSU for M4300-24X24F, M4300-48X, M4300-48XF
- C14 connector
- Capacity
  - 110V-240V AC power input
  - Up to 250W output power at 110/220V AC

APS150W
Power Supply Unit

Ordering information

- Americas, Europe: APS150W-100NES
- Asia Pacific: APS150W-100AJS
- Warranty: 5 years



- Additional PSU for M4300-28G and M4300-52G
- C14 connector
- Capacity:
  - 110V-240V AC power input
  - Up to 150W output power at 110/220V AC

GBIC SFP and SFP+ Optics for M4300 series

ORDERING INFORMATION **WORLDWIDE:** SEE TABLE BELOW **WARRANTY: 5 YEARS**	Multimode Fiber (MMF)		Single mode Fiber (SMF)
	OM1 or OM2 62.5/125µm	OM3 or OM4 50/125µm	9/125µm
40 Gigabit QSFP+ • Fits into M4300-96X / APM402XL QSFP+ interfaces		**AXLM761** 40GBASE-SR4-BiDi Duplex 1 MMF link - LC duplex connector up to 100m (328 ft) **AXLM761-10000S (1 unit)**	**AXLM762** 40GBASE-LR4 long reach single mode LC duplex connector up to 10km (6.2 miles) **AXLM762-10000S (1 unit)**
10 Gigabit SFP+ • Fits into M4300 models SFP+ interfaces	**AXM763** 10GBase-LRM long reach multimode 802.3aq - LC duplex connector up to 220m (722 ft) **AXM763-10000S (1 unit)**	**AXM763** 10GBase-LRM long reach multimode 802.3aq - LC duplex connector up to 260m (853 ft) **AXM763-10000S (1 unit)**	**AXM762** 10GBase-LR long reach single mode LC duplex connector up to 10km (6.2 miles) **AXM762-10000S (1 unit)** **AXM762P10-10000S** **(pack of 10 units)**
		AXM761 10GBase-SR short reach multimode LC duplex connector OM3: up to 300m (984 ft) OM4: up to 550m (1,804 ft) **AXM761-10000S (1 unit)** **AXM761P10-10000S** **(pack of 10 units)**	**AXM764** 10GBase-LR LITE single mode LC duplex connector up to 2km (1.2 mile) **AXM764-10000S (1 unit)**
Gigabit SFP • Fits into M4300 models SFP+ interfaces	**AGM731F** 1000Base-SX short range multimode LC duplex connector up to 275m (902 ft) **AGM731F (1 unit)**	**AGM731F** 1000Base-SX short range multimode LC duplex connector OM3: up to 550m (1,804 ft) OM4: up to 1,000m (3,280 ft) **AGM731F (1 unit)**	**AGM732F** 1000Base-LX long range single mode LC duplex connector up to 10km (6.2 miles) **AGM732F (1 unit)**

GBIC SFP and SFP+ Optics for M4300 series

AGM734
1000BASE-T RJ45 SFP (Gigabit)

ORDERING INFORMATION
- WORLDWIDE: AGM734-10000S
- WARRANTY: 5 YEARS

- Fits into M4300 models SFP+ interfaces
- 1 port Gigabit RJ45
- Supports only 1000Mbps full-duplex mode
- Up to 100m (328 ft) with Cat5 RJ45 or better
- Conveniently adds 1G copper connectivity to M4300 fiber interfaces

AXM765
10GBASE-T RJ45 SFP+ (10 Gigabit)

ORDERING INFORMATION
- WORLDWIDE: AXM765-10000S
- WARRANTY: 5 YEARS

- Fits into M4300 models SFP+ interfaces
- 1 port 10GBASE-T RJ45
- Copper connectivity up to 30 m (98 feet) distance
- CAT6a or better wiring required for 10GBASE-T up to 30 meters
- Conveniently adds 10G copper connectivity to M4300 fiber interfaces

Direct Attach Cables for M4300 series

ORDERING INFORMATION **WORLDWIDE:** SEE TABLE BELOW **WARRANTY: 5 YEARS**	SFP+ to SFP+		
	1 meter (3.3 ft)	3 meters (9.8 ft)	
40 Gigabit DAC • Fits into M4300-96X / APM402XL QSFP+ interfaces	**AXLC761** 40G QSFP+ Cu (passive) QSFP+ connectors **AXLC761-10000S (1 unit)**	**AXLC763** 40G QSFP+ Cu (passive) QSFP+ connectors **AXLC763-10000S (1 unit)**

M4300-48XF	-	2 (shared, back)	-	48	-
M4300-96X (12 slots for port cards)	-	-	Up to 96 (independent)	Up to 96 (independent)	Up to 24 (independent)

Features Support		
IEEE 802.3af (up to 15.4W per port)	Yes	
IEEE 802.3at (up to 30W per port)	Yes	
IEEE 802.3at Layer 2 (LLDP) method	Yes	
IEEE 802.3at 2-event classification	Yes	
PoE timer/schedule (week, days, hours)	Yes	
PROCESSOR/MEMORY		
Processor (CPU) - M4300-96X	Integrated 1.4Ghz CPU in switching silicon	
Processor (CPU) - all other models	Integrated 800Mhz CPU in switching silicon	
System memory (RAM) - M4300-96X	2 GB	
System memory (RAM) - all other models	1 GB	
Code storage (flash) - all other models	256 MB	Dual firmware image
Packet Buffer Memory		
M4300-96X	96 Mb	Dynamically shared across only used ports
M4300-24X24F, M4300-48X, M4300-48XF	56 Mb	
M4300-12X12F, M4300-24X, M4300-24XF	32 Mb	
All other models	16 Mb	
VIRTUAL CHASSIS STACKING		
Max physical switches per stack	8 (any combination of M4300 switches)	
Max physical ports per stack	384 x 1G ports or 768 x 10G ports or 192 x 40G ports or a combination	
Mixed stacking between 1G models and 10G/40G models	Yes	
Mixed stacking table size	Mixed stacking SDM template is used based on "least common denominator" set of capacities	
Stacking ports (pre-configuration)	No pre-configured stacking port: any 40G or 10G port (copper, fiber) and any media type (RJ45, SFP+, DAC) can be used for stacking	
Stacking ports (max number)	1G models: up to 4 ports per switch 10G models: up to 16 ports per switch	
Vertical and horizontal stacking topologies	Chain, single ring, dual ring, mesh, spine and leaf	
Distant stacking using fiber	Yes	
Non-stop forwarding (NSF)	Yes	
Hitless management unit failover and failback	Yes, no service interruption across the stack	
Automatic unit replacement (AUR)	Yes	
Distributed Link Aggregation (LAGs across the stack)	Yes	
Stack with previous M5300, M7100, M7300 versions	Not supported	
PERFORMANCE SUMMARY		
Switching fabric		
M4300-8X8F, M4300-16X	320 Gbps	Line-rate (non blocking fabric)
M4300-12X12F, M4300-24X, M4300-24XF	480 Gbps	
M4300-24X24F, M4300-48X, M4300-48XF	960 Gbps	
M4300-96X	1.920 Tbps	
M4300-28G, M4300-28G-PoE+	128 Gbps	
M4300-52G, M4300-52G-PoE+	176 Gbps	
Throughput		
M4300-8X8F, M4300-16X	238 Mpps	
M4300-12X12F, M4300-24X, M4300-24XF	357 Mpps	
M4300-24X24F, M4300-48X, M4300-48XF	714 Mpps	
M4300-96X	2,857 Mpps	
M4300-28G, M4300-28G-PoE+	95.2 Mpps	
M4300-52G, M4300-52G-PoE+	130.9 Mpps	

Latency - 10G Fiber	64-byte frames	512-byte frames	1024-byte frames	1518-byte frames

Green Ethernet				
Energy Efficient Ethernet (EEE)	Compliant with IEEE 802.3az Energy Efficient Ethernet Task Force		Deactivated by default	

Other Metrics		
Forwarding mode	Store-and-forward	
Addressing	48-bit MAC address	
Address database size (M4300-96X) (M4300-24X24F, M4300-48X, M4300-48XF) (all other models)	256K MAC addresses 128K MAC addresses 16K MAC addresses	
Number of VLANs	4,093 VLANs (802.1Q) simultaneously - standalone mode 4,093 VLANs - stack mode (except when mixed stacks of M4300-96X with other models - 1,024 VLANs only)	
Number of multicast groups filtered (IGMP)	4K total (2,048 IPv4 and 2,048 IPv6)	
Number of Link Aggregation Groups (LAGs)	128 LAGs with up to 8 ports per group 802.3ad / 802.1AX-2008	
Number of hardware queues for QoS (Standalone)	8 queues	
Number of hardware queues for QoS (Stack)	7 queues	
Number of routes (M4300-24X24F, -48X, -48XF, -96X) IPv4 IPv6 (all other models) IPv4 IPv6	 12,288 IPv4 Unicast Routes in IPv4 Routing Default SDM Template 4,096 IPv6 Unicast Routes in Dual IPv4 and IPv6 SDM Template 512 IPv4 Unicast Routes in IPv4 Routing Default SDM Template 256 IPv6 Multicast Routes in Dual IPv4 and IPv6 SDM Template	SDM (System Data Management, or switch database) templates allow for granular system resources distribution depending on IPv4 or IPv6 applications
Number of static routes IPv4 IPv6	 64 64	
RIP application route scaling IPv4	 512	
OSPF application route scaling (M4300-24X24F, -48X, -48XF, -96X) IPv4 IPv6 (all other models) IPv4 IPv6	 12,288 4,096 512 256	
Number of IP interfaces (port or VLAN)	128	
Jumbo frame support	up to 9KB packet size	
Acoustic noise (ANSI-S10.12)	@ 25°C ambient (77°F)	
M4300-8X8F	36.9 dB	Fan speed control
M4300-16X (XSM4316PA version, APS299W PSU)	36 dB	
M4300-16X (XSM4316PB version, APS600W PSU)	35 dB	
M4300-12X12F	36.9 dB	
M4300-24X	37dB	
M4300-24XF	39.7 dB	
M4300-24X24F	35.8 dB	
M4300-48X	40.3dB	
M4300-48XF	42.4 dB	
M4300-96X	35.8dB (no PoE); 66.8dB (max PoE)	
M4300-28G	30.3 dB	
M4300-28G-PoE+	39.8 dB	
M4300-52G	31.5 dB	
M4300-52G-PoE+	39.8 dB	

Heat Dissipation (BTU)	1 PSU	2 PSUs in RPS mode	2 PSUs in EPS mode	2 PSUs in EPS mode with external RPS
M4300-8X8F	185.77 BTU/hr	-	-	-
M4300-16X (APS199W, without PoE)	186 BTU/hr	-	-	-
M4300-16X (APS199W PSU, with max PoE 199W)	1,053.43 BTU/hr	-	-	-
M4300-16X (APS600W PSU, with max PoE 500W)	2,081.64 BTU/hr	-	-	-
M4300-12X12F	367.75 BTU/hr	-	-	-
M4300-24X	473.9 BTU/hr	-	-	-
M4300-24XF	330.6 BTU/hr	-	-	-
M4300-24X24F	610.39 BTU/hr	610.39 BTU/hr	-	-
M4300-48X	899.9 BTU/hr	899.9 BTU/hr	-	-

M4300-96X (without PoE)	2145.82 BTU/hr	2145.82 BTU/hr		-
M4300-96X (with max PoE: 1,440W)	-	-	7,605.15 BTU/hr	-
M4300-28G	117.78 BTU/hr	117.78 BTU/hr	-	-
M4300-28G-PoE+ (GSM4328PA version 550W PSU)	1,969.88 BTU/hr	1,963.05 BTU/hr	2,720.96 BTU/hr	-
M4300-28G-PoE+ (GSM4328PB version 1,000W PSU)	2,844.55 BTU/hr	2,842.15 BTU/hr	2,844.55 BTU/hr	-
M4300-52G	161.82 BTU/hr	161.82 BTU/hr	-	-
M4300-52G-PoE+ (GSM4352PA version 550W PSU)	2,079.13 BTU/hr	2,085.95 BTU/hr	2,953.11 BTU/hr	3,123.81 BTU/hr
M4300-52G-PoE+ (GSM4352PB version 1,000W PSU)	3,031.63 BTU/hr	3,079.43 BTU/hr	5,411.19 BTU/hr	5,650.17 BTU/hr

Mean Time Between Failures (MTBF)	@ 25°C ambient (77°F)	@ 50°C ambient (131°F)
M4300-8X8F	196,120 hours (~22.4 years)	123,644 hours (~14.1 years)
M4300-16X	690,301 hours (~78.8 years)	207,500 hours (~23.7 years)
M4300-12X12F	192,898 hours (~22 years)	121,331 hours (~13.9 years)
M4300-24X	247,437 hours (~28.2 years)	153,855 hours (~17.5 years)
M4300-24XF	968,447 hours (~110.6 years)	159,042 hours (~18.2 years)
M4300-24X24F	133,176 hours (~15.2 years)	111,734 hours (~12.8 years)
M4300-96X	519,784 hours (~59.3 years)	196,635 hours (~22.4 years)
M4300-48X	249,393 hours (28.4 years)	154,220 hours (17.6 years)
M4300-48XF	657,392 hours (~75 years)	10,2690 hours (~11.7 years)
M4300-28G	1,328,968 hours (~151.7 years)	444,117 hours (~50.7 years)
M4300-28G-PoE+	1,189,685 hours (~135.8 years)	491,811 hours (~56.1 years)
M4300-52G	578,472 hours (~66 years)	301,524 hours (~34.4 years)
M4300-52G-PoE+	673,207 hours (~76.9 years)	247,969 hours (~28.3 years)

L2 SERVICES - VLANS		
IEEE 802.1Q VLAN Tagging	802.1Q-1998	Up to 4,093 VLANs - 802.1Q Tagging
Protocol Based VLANs IP subnet ARP IPX	Yes Yes Yes Yes	
Subnet based VLANs	Yes	
MAC based VLANs	Yes	
Voice VLAN	Yes	Based on phones OUI bytes (internal database, or user-maintained) or protocols (SIP, H323 and SCCP)
Private Edge VLAN	Yes	

Private VLAN	Yes	
IEEE 802.1x Guest VLAN RADIUS based VLAN assignment via .1x RADIUS based Filter ID assignment via .1x MAC-based .1x Unauthenticated VLAN	Yes Yes Yes Yes Yes Yes	802.1x-2004 IP phones and PCs can authenticate on the same port but under different VLAN assignment policies
Double VLAN Tagging Enabling dvlan-tunnel makes interface Global ethertype (TPID) Interface ethertype (TPID) Customer ID using PVID	Yes Yes Yes Yes Yes	
GARP with GVRP/GMRP	Yes	Automatic registration for membership in VLANs or in multicast groups
Multiple Registration Protocol (MRP)	Yes	Can replace GARP functionality
Multicast VLAN Registration Protocol (MVRP)	Yes	Can replace GARP functionality
MVR (Multicast VLAN registration)	Yes	
L2 SERVICES - AVAILABILITY		
IEEE 802.3ad - LAGs LACP LACP automatically reverts to and from Static LAG Static LAGs Local Preference per LAG	Yes Yes Yes Yes Yes	Up to 128 LAGs and up to 8 ports per group
LAG Hashing	Yes	
LAG Member Port Flaps Tracking	Yes	
LAG Local Preference	Yes	Known unicast traffic egresses only out of local blade LAG interfarce members
Distributed Link Aggregation	Yes	LAGs across the stack
Storm Control	Yes	
IEEE 802.3x (Full Duplex and flow control) Per port Flow Control	Yes Yes	Asymmetric and Symmetric Flow Control
Priority Flow Control (PFC) Standardized by IEEE 802.1Qbb	M4300-12X12F, 24X, 24XF, 24X24F, 48X, 48XF and 96X only	Enables Flow Control per traffic class, full-duplex, CLI
UDLD Support (Unidirectional Link Detection) Normal-Mode Aggressive-Mode	Yes Yes Yes	
Link Dependency	Yes	Allow the link status of specified ports to be dependent on the link status of other ports
IEEE 802.1D Spanning Tree Protocol	Yes	
IEEE 802.1w Rapid Spanning Tree	Yes	
IEEE 802.1s Multiple Spanning Tree	Yes	
Per VLAN STP (PVSTP) with FastUplink and FastBackbone	Yes (CLI only)	PVST+ interoperability
Per VLAN Rapid STP (PVRSTP)	Yes (CLI only)	RPVST+ interoperability
STP Loop Guard	Yes	
STP Root Guard	Yes	
STP BPDU Guard	Yes	
STP BPDU Filtering	Yes	
STP BPDU Flooding	Yes	

L2 SERVICES - MULTICAST FILTERING	
IGMPv2 Snooping Support	Yes
IGMPv3 Snooping Support	Yes
IGMP+ Enhanced Implementation	Yes For automatic multicast across M4300/M4500 (Spine and Leaf) at Layer 2, removing the need for L3 PIM routing
MLDv1 Snooping Support	Yes
MLDv2 Snooping Support	Yes
Expedited Leave function	Yes
Static L2 Multicast Filtering	Yes
Enable IGMP / MLD Snooping per VLAN	Yes
IGMPv1/v2 Snooping Querier, compatible v3 queries	Yes
MLDv1 Snooping Querier	Yes
IGMP Snooping Enable IGMP Snooping per VLAN Snooping Querier	 Yes Yes
MGMD Snooping Control Packet Flooding Flooding to mRouter Ports Remove Flood-All-Unregistered Option	 Yes Yes Yes
Multicast VLAN registration (MVR)	Yes
L3 SERVICES - MULTICAST ROUTING	
IGMP Proxy	Yes
MLD Proxy	Yes
Any Source Multicast (ASM)	Yes
Source Specific Multicast (SSM)	Yes
Multicast streams routing between subnets, VLANs	Yes
Multicast static routes (IPv4, IPv6)	Yes
DVMRP (Distance Vector Multicast Routing Protocol)	Yes
Neighbor discovery	Yes
PIM-DM (Multicast Routing - dense mode)	Yes
PIM-DM (IPv6)	Yes
PIM-SM (Multicast Routing - sparse mode)	Yes
PIM-SM (IPv6)	Yes
PIM multi-hop RP support	Yes
PIM Timer Accuracy	Yes
PIM-SM Unhandled Events	Yes
IPMC replication (hardware support)	Yes
L3 SERVICES - DHCP	
DHCP IPv4 / DHCP IPv6 Client	Yes
DHCP IPv4 / DHCP IPv6 Server (Stateless, Stateful)	Yes
DHCP Snooping IPv4 / IPv6	Yes
BootP Relay IPv4 / IPv6	Yes
DHCP Relay IPv4 / IPv6	Yes
DHCP Relay Option 82 circuit-id and remote-id for VLANs	Yes
Multiple Helper IPs	Yes
Auto Install (DHCP options 66, 67, 150 and 55, 125)	Yes

L3 SERVICES - ROUTING		
Static Routing / ECMP Static Routing	IPv4/IPv6	
Multiple next hops to a given destination	Yes	
Load sharing, Redundancy	Yes	
Default routes	Yes	
Static Reject routes	Yes	
Port Based Routing	Yes	
VLAN Routing	Yes	
802.3ad (LAG) for router ports	Yes	
VRRP	IPv4	
Pingable VRRP interface	Yes	
VRRP Route/Interface Tracking	Yes	
Loopback Interfaces	Yes	
Tunnel interfaces	IPv4 / IPv6	
Configured 6to4 tunnels	Yes	
Automatic 6to4 tunnels	Yes	
6to4 Border Router	Yes	
RIP	IPv4	
RIPv1/RIPv2	Yes	
Route Redistribution	Yes	Enables the exchange of routing information among different routing protocols operating within a router
OSPF	IPv4/IPv6	
OSPFv2 RFC 2328 including older RFC 1583 support	Yes	
OSPFv3	Yes	
OSPF Not-So-Stubby Area (NSSA) Option	Yes	
Forwarding of OSPF Opaque LSAs	Yes	
Passive interface feature	Yes	
Static Area Range Costs feature	Yes	
OSPF Equal Cost Multipath (ECMP)	Yes	
Dynamically learned ECMP routes	Yes	
Statically learned ECMP routes	Yes	
OSPF Max Metric feature	Yes	
Automatic Exiting of Stub Router Mode feature	Yes	
Static Area Range Costs feature	Yes	
OSPF LCA Pacing feature	Yes	
OSPF Flood Blocking feature	Yes	
OSPF Transit-Only Network Hiding	Yes	
IP Multinetting	Yes	
ICMP throttling	Yes	
Router Discovery Protocol	Yes	
DNS Client	IPv4/IPv6	
IP Helper	Yes	
Max IP Helper entries	512	
IP Event Dampening	IPv4/IPv6	
Proxy ARP	IPv4/IPv6	
ICMP	IPv4/IPv6	
ICMP redirect detection in hardware	Yes	
Policy Based Routing (PBR)	IPv4/IPv6	
Based on the size of the packet	Yes	
Based on the Protocol of the payload (Protocol ID field)	Yes	
Based on Source MAC address	Yes	
Based on Source or Destination IP address	Yes	
Based on VLAN tag	Yes	
Based on Priority(802.1P priority)	Yes	

NETWORK MONITORING AND DISCOVERY SERVICES				
ISDP (Industry Standard Discovery Protocol)	Yes		Can interoperate with devices running CDP	
802.1ab LLDP	Yes			
802.1ab LLDP - MED	Yes			
SNMP	V1, V2, V3			
RMON 1,2,3,9	Yes			
sFlow	Yes (IPv4 and IPv6 headers)			
SECURITY				
Network Storm Protection, DoS				
Broadcast, Unicast, Multicast DoS Protection Denial of Service Protection (control plane) Denial of Service Protection (data plane)	Yes Yes Yes		Switch CPU protection Switch Traffic protection	
DoS Attacks Protection	SIPDIP SMACDMAC FIRSTFRAG TCPFRAG TCPFLAG TCPPORT	UDPPORT TCPFLAGSEQ TCPOFFSET TCPSYN TCPSYNFIN TCPFINURGPSH	L4PORT ICMP ICMPV4 ICMPV6 ICMPFRAG PINGFLOOD	SYNACK
CPU Rate Limiting	Yes	Applied to IPv4 and IPv6 multicast packets with unknown L3 addresses when IP routing/multicast enabled		
ICMP throttling	Yes	Restrict ICMP, PING traffic for ICMP-based DoS attacks		
Management				
Management ACL (MACAL) Max Rules	Yes 64		Protects management CPU access through the LAN	
Out of band Management	Yes		In-band management can be shut down entirely when out-of-band management network	
Radius accounting	Yes		RFC 2565 and RFC 2866	
TACACS+	Yes			
Malicious Code Detection	Yes		Software image files and Configuration files with digital signatures	
Network Traffic				
Access Control Lists (ACLs)	L2 / L3 / L4		MAC, IPv4, IPv6, TCP, UDP	
Time-based ACLs	Yes			
Protocol-based ACLs	Yes			
ACL over VLANs	Yes			
Dynamic ACLs	Yes			
IEEE 802.1x Radius Port Access Authentication	Yes		Up to 48 clients (802.1x) per port are supported, including the authentication of the users domain	
802.1x MAC Address Authentication Bypass (MAB)	Yes		Supplemental authentication mechanism for non-802.1x devices, based on their MAC address only	
Network Authentication Successive Tiering	Yes		Dot1x-> MAP -> Captive Portal successive authentication methods based on configured time-outs	
Port Security	Yes			
IP Source Guard	Yes		IPv4 / IPv6	
DHCP Snooping	Yes		IPv4 / IPv6	
Dynamic ARP Inspection	Yes		IPv4 / IPv6	
IPv6 RA Guard Stateless Mode	Yes			
MAC Filtering	Yes			
Port MAC Locking	Yes			

Private Edge VLAN	Yes	A protected port doesn't forward any traffic (unicast, multicast, or broadcast) to any other protected port - same switch
Private VLANs	Yes	Scales Private Edge VLANs by providing Layer 2 isolation between ports across switches in same Layer 2 network
QUALITY OF SERVICE (QOS) - SUMMARY		
Access Lists	Yes	
L2 MAC, L3 IP and L4 Port ACLs	Yes	
Ingress	Yes	
Egress	Yes	
802.3ad (LAG) for ACL assignment	Yes	
Binding ACLs to VLANs	Yes	
ACL Logging	Yes	
Support for IPv6 fields	Yes	
	Yes	
DiffServ QoS	Yes	
Edge Node applicability	Yes	
Interior Node applicability	Yes	
802.3ad (LAG) for service interface	Yes	
Support for IPv6 fields	Yes	
Ingress/Egress	Yes	
IEEE 802.1p COS	Yes	
802.3ad (LAG) for COS configuration	Yes	
WRED (Weighted Deficit Round Robin)	Yes	
Strict Priority queue technology	Yes	
Single Rate Policing	Yes (CLI only)	
Committed Information Rate	Yes	
Committed Burst Size	Yes	
Excessive Burst Size	Yes	
DiffServ feature applied to class maps	Yes	
Auto-VoIP	Yes, based on protocols (SIP, H323 and SCCP) or on OUI bytes (default database and user-based OUIs) in the phone source MAC address	
iSCSI Flow Acceleration	Yes	
Dot1p Marking	Yes	
IP DSCP Marking	Yes	
QOS - ACL FEATURE SUPPORT		
ACL Support (general, includes IP ACLs)	Yes	
MAC ACL Support	Yes	
IP Rule Match Fields:		
Destination IP	Inbound/Outbound	
Destination IPv6 IP	Inbound/Outbound	
Destination L4 Port	Inbound/Outbound	
Every Packet	Inbound/Outbound	
IP DSCP	Inbound/Outbound	
IP Precedence	Inbound/Outbound	
IP TOS	Inbound/Outbound	
Protocol	Inbound/Outbound	
Source IP (for Mask support see below)	Inbound/Outbound	
Source IPv6 IP	Inbound/Outbound	
L3 IPv6 Flow Label	Inbound	
Source L4 Port	Inbound/Outbound	
TCP Flag	Inbound/Outbound	
Supports Masking	Inbound/Outbound	

MAC Rule Match Fields	
COS	Inbound/Outbound
Destination MAC	Inbound/Outbound
Destination MAC Mask	Inbound/Outbound
Ethertype	Inbound/Outbound
Source MAC	Inbound/Outbound
Source MAC Mask	Inbound/Outbound
VLAN ID	Inbound/Outbound
Rules attributes	
Assign Queue	Inbound
Logging -- deny rules	Inbound/Outbound
Mirror (to supported interface types only)	Inbound
Redirect (to supported interface types only)	Inbound
Rate Limiting -- permit rules	Inbound/Outbound
Interface	
Inbound direction	Yes
Outbound direction	Yes
Supports LAG interfaces	Yes
Supports Control-plane interface	Yes
Multiple ACLs per interface, dir	Yes
Mixed-type ACLs per interface, dir	Yes
Mixed L2/IPv4 ACLs per interface, inbound	Yes
Mixed IPv4/IPv6 ACLs per interface, inbound	Yes
Mixed IPv4/IPv6 ACLs per interface, outbound	Yes
QOS - DIFFSERV FEATURE SUPPORT	
DiffServ Supported	Yes
Class Type	
All	Yes
Class Match Criteria	
COS	Inbound/Outbound
COS2 (Secondary COS)	Inbound
Destination IP (for Mask support see below)	Inbound/Outbound
Destination IPv6 IP	Inbound/Outbound
Destination L4 Port	Inbound/Outbound
Destination MAC (for Mask support see below)	Inbound/Outbound
Ethertype	Inbound/Outbound
Every Packet	Inbound/Outbound
IP DSCP	Inbound/Outbound
IP Precedence	Inbound/Outbound
IP TOS (for Mask support see below)	Inbound/Outbound
Protocol	Inbound/Outbound
Reference Class	Inbound/Outbound
Source IP (for Mask support see below)	Inbound/Outbound
Source IPv6 IP	Inbound/Outbound
L3 IPv6 Flow Label	Inbound
Source L4 Port	Inbound/Outbound
Source MAC (for Mask support see below)	Inbound/Outbound
VLAN ID (Source VID)	Inbound/Outbound
VLAN ID2 (Secondary VLAN) (Source VID)	Inbound/Outbound
Supports Masking	Inbound/Outbound
Policy	
Out Class Unrestricted	Yes

Policy Attributes -- Inbound	
Assign Queue	Yes
Drop	Yes
Mark COS	Yes
Mark COS-AS-COS2	Yes
Mark COS2 (Secondary COS)	Yes
Mark IP DSCP	Yes
Mark IP Precedence	Yes
Mirror (to supported interface types only)	Yes
Police Simple	Yes
Police Single-Rate	Yes
Police Two-Rate	Yes
Police Color Aware Mode	Yes
Redirect (to supported interface types only)	Yes
Policy Attributes -- Outbound	Yes
Drop	Yes
Mark COS	Yes
Mark IP DSCP	Yes
Mark IP Precedence	Yes
Mirror (to supported interface types only)	Yes
Police Simple	Yes
Police Single-Rate	Yes
Police Two-Rate	Yes
Police Color Aware Mode	Yes
Redirect (to supported interface types only)	Yes
Service Interface	
Inbound Slot.Port configurable	Yes
Inbound 'All' Ports configurable	Yes
Outbound Slot.Port configurable	Yes
Outbound 'All' Ports configurable	Yes
Supports LAG interfaces	Yes
Mixed L2/IPv4 match criteria, inbound	Yes
Mixed IPv4/IPv6 match criteria, inbound	Yes
Mixed IPv4/IPv6 match criteria, outbound	Yes
PHB Support	
EF	Yes
AF4x	Yes
AF3x	Yes
AF2x	Yes
AF1x	Yes
CS	Yes
Statistics -- Policy Instance	
Offered	packets
Discarded	packets
QOS - COS FEATURE SUPPORT	
COS Support	Yes
Supports LAG interfaces	Yes
COS Mapping Config	
Configurable per-interface	Yes
IP DSCP Mapping	Yes

COS Queue Config	
Queue Parms configurable per-interface	Yes
Drop Parms configurable per-interface	Yes
Interface Traffic Shaping (for whole egress interface)	Yes
Minimum Bandwidth	Yes
Weighted Deficit Round Robin (WDRR) Support	Yes
Maximum Queue Weight	127
WRED Support	Yes
PTP - PTPV2 FEATURE SUPPORT	
PTPv2	All M4300 models, except 48-port 10G models (M4300-24X24F, M4300-48X, M4300-48XF)
IEEE 1588 PTPv2 Section 10 and 11.5	Yes
Implementation	Transparent Clock (TC) End-to-End implementation considering the residence time of PTPv2 packets from ingress to egress
Method	Residence time of the PPTPv2 packet at the egress port level
PTPv2 packet fields that are updated	The "Sync & Delay_Req" field of passing/egressing out PTPv2 packets is updated with the residence time in the switch
PTPv2 packet fields that are NOT updated	Other fields in PTPv2 packets ("Announce", "Delay_Resp", "Pdelay_Req" and "Pdelay_Resp") are not updated
FUNCTIONAL SUMMARY - IETF RFC STANDARDS AND IEEE NETWORK PROTOCOLS	
Core Management	
RFC 854 — Telnet	RFC 3414 — User-Based Security Model
RFC 855 — Telnet option specifications	RFC 3415 — View-based Access Control Model
RFC 1155 — SMI v1	RFC 3416 — Version 2 of SNMP Protocol Operations
RFC 1157 — SNMP	RFC 3417 — Transport Mappings
RFC 1212 — Concise MIB definitions	RFC 3418 — Management Information Base (MIB) for the Simple Network Management Protocol (SNMP)
RFC 1867 — HTML/2.0 forms with file upload extensions	Configurable Management VLAN
RFC 1901 — Community-based SNMP v2	SSL 3.0 and TLS 1.2
RFC 1908 — Coexistence between SNMP v1 and SNMP v2	– RFC 2246 — The TLS protocol, version 1.0
RFC 2068 — HTTP/1.1 protocol as updated by draft-ietf-http-v11-spec-rev-03	– RFC 2346 — AES cipher suites for Transport layer security
RFC 2271 — SNMP framework MIB	– RFC 2818 — HTTP over TLS
RFC 2295 — Transparent content negotiation	SSH 2.0
RFC 2296 — Remote variant selection; RSVA/1.0 state management cookies — draft-ietf-http-state-mgmt-05	– RFC 4253 — SSH transport layer protocol
RFC 2576 — Coexistence between SNMP v1, v2, and v3	– RFC 4252 — SSH authentication protocol
RFC 2578 — SMI v2	– RFC 4254 — SSH connection protocol
RFC 2579 — Textual conventions for SMI v2	– RFC 4251 — SSH protocol architecture
RFC 2580 — Conformance statements for SMI v2	– RFC 4716 — SECSH public key file format
RFC 3410 — Introduction and Applicability Statements for Internet Standard Management Framework	– RFC 4419 — Diffie-Hellman group exchange for the SSH transport layer protocol
RFC 3411 — An Architecture for Describing SNMP Management Frameworks	HTML 4.0 specification, December 1997
RFC 3412 — Message Processing & Dispatching	Java Script™ 1.3
RFC 3413 — SNMP Applications	
Advanced Management	
Industry-standard CLI with the following features: – Scripting capability – Command completion – Context-sensitive help	Optional user password encryption Multisession Telnet server Auto Image Upgrade

Core Switching	
IEEE 802.1AB — Link level discovery protocol	IEEE 802.3ba — 40GbE (M4300-96X)
IEEE 802.1D — Spanning tree	IEEE 802.3ad — Link aggregation
IEEE 802.1p — Ethernet priority with user provisioning and mapping	IEEE 802.3ae — 10 GbE
IEEE 802.1Q — Virtual LANs w/ port-based VLANs	IEEE 802.3af — Power over Ethernet
IEEE 802.1S — Multiple spanning tree compatibility	IEEE 802.3at — Power over Ethernet Plus
IEEE 802.1v — Protocol-based VLANs	IEEE 802.3x — Flow control
IEEE 802.1W — Rapid spanning tree	ANSI/TIA-1057 — LLDP-MED
iEEE 802.1AB — LLDP	GARP — Generic Attribute Registration Protocol: clause 12, 802.1D-2004
IEEE 802.1X — Port-based authentication	GMRP — Dynamic L2 multicast registration: clause 10, 802.1D-2004
IEEE 802.3 — 10Base-T	GVRP — Dynamic VLAN registration: clause 11.2, 802.1Q-2003
IEEE 802.3u — 100Base-T	RFC 4541 — IGMP snooping and MLD snooping
IEEE 802.3bz-2016 — 2.5G and 5GBASE-T (M4300-96X)	RFC 5171 — UniDirectional Link Detection (UDLD) Protocol
Additional Layer 2 Functionality	
Broadcast storm recovery	IGMP and MLD snooping querier
Double VLAN/VMAN tagging	Port MAC locking
DHCP Snooping	MAC-based VLANs
Dynamic ARP inspection	IP source guard
Independent VLAN Learning (IVL) support	IP subnet-based VLANs
IPv6 classification APIs	Voice VLANs
Jumbo Ethernet frames	Protected ports
Port mirroring	IGMP snooping
Static MAC filtering	Green Ethernet power savings mode
System Facilities	
Event and error logging facility	RFC 2030 — Simple Network Time Protocol (SNTP) V4 for IPv4, IPv6, and OSI
Runtime and configuration download capability	RFC 2131 — DHCP Client/Server
PING utility	RFC 2132 — DHCP options and BOOTP vendor extensions
XMODEM	RFC 2865 — RADIUS client
RFC 768 — UDP	RFC 2866 — RADIUS accounting
RFC 783 — TFTP	RFC 2868 — RADIUS attributes for tunnel protocol support
RFC 791 — IP	RFC 2869 — RADIUS extensions
RFC 792 — ICMP	RFC 28869bis — RADIUS support for Extensible Authentication Protocol (EAP)
RFC 793 — TCP	RFC 5176 — RADIUS Cha
) —TCP RF 5176—RADIUS[] RADIUS Protoci CRF TCP RADIUS xtensions	
	791 — TCP 5176 TCP

RFC 1321 — Message digest algorithm	Power Source Equipment (PSE) IEEE 802.af Powered Ethernet (DTE Power via MDI) standard
RFC 1534 — Interoperability between BOOTP and DHCP	
Core Routing	
RFC 826 — Ethernet ARP	RFC 2328 — OSPFv2
RFC 894 — Transmission of IP datagrams over Ethernet networks	RFC 2385—Protection of BGP Sessions via the TCP MD5 Signature Option
RFC 896 — Congestion control in IP/TCP networks	RFC 2453 — RIP v2
RFC 1027 — Using ARP to implement transparent subnet gateways (Proxy ARP)	RFC 3021 — Using 31-Bit Prefixes on Point-to-Point Links
RFC 1256 — ICMP router discovery messages	RFC 3046 — DHCP/BOOTP relay
RFC 1321 — Message digest algorithm	RFC 3101 — The OSPF "Not So Stubby Area" (NSSA) option
RFC 1519 — CIDR	RFC 3768 — Virtual Router Redundancy Protocol (VRRP)
RFC 1765 — OSPF database overflow	RFC 3623—Graceful OSPF Restart
RFC 1812 — Requirements for IPv4 routers	Route redistribution across RIP, BGP, and OSPF
RFC 2082 — RIP-2 MD5 authentication	VLAN routing
RFC 2131 — DHCP relay	
Quality of Service - DiffServ	
RFC 2474 — Definition of the differentiated services field (DS Field) in IPv4/IPv6 headers	RFC 2697 — A Single Rate Three Color Marker
RFC 2475 — An architecture for differentiated services	RFC 3246 — An expedited forwarding PHB (Per-Hop Behavior)
RFC 2597 — Assured forwarding PHB group	RFC 3260 — New terminology and clarifications for DiffServ
Quality of Service - Access Control Lists (ACLs)	
Permit/deny actions for inbound or outbound IP traffic classification based on: – Type of service (ToS) or differentiated services (DS) DSCP field – Source IP address – Destination IP address – TCP/UDP source port – TCP/UDP destination port – IPv6 flow label – IP protocol number	Permit/deny actions for inbound or outbound Layer 2 traffic classification based on: – Source MAC address – Destination MAC address – EtherType – VLAN identifier value or range (outer and/or inner VLAN tag) – 802.1p user priority (outer and/or inner VLAN tag) Optional rule attributes: – Assign matching traffic flow to a specific queue – Redirect or mirror (flow-based mirroring) matching traffic flow to a specific port – Generate trap log entries containing rule hit counts
Quality of Service - Class of Service (CoS)	
Direct user configuration of the following: – IP DSCP to traffic class mapping – IP precedence to traffic class mapping – Interface trust mode: 802.1p, IP Precedence, IP DSCP, or untrusted – Interface traffic shaping rate – Minimum and maximum bandwidth per queue – Strict priority versus weighted (WRR/WDRR/WFQ) scheduling per queue – Tail drop versus Weighted Random Early Detection (WRED) queue depth management	Auto VoIP

Core Multicast	
RFC 1112 — Host extensions for IP multicasting	RFC3973 — PIM-DM
RFC 2236 — IGMP v2	RFC4601 — PIM-SM
RFC 2710 — MLDv1	Draft-ietf-idmr-dvmrp-v3-10 — DVMRP
RFC 2365 — Administratively scoped boundaries	Draft-ietf-magma-igmp-proxy-06.txt — IGMP/MLD-based multicast forwarding (IGMP/MLD proxying)
RFC 3376 — IGMPv3	Draft-ietf-magma-igmpv3-and-routing-05.txt — IGMPv3 and multicast routing protocol interaction
RFC3810 — MLDv2	Static RP configuration
Core IPv6 Routing	
RFC 1981 — Path MTU for IPv6	RFC 3513 — Addressing architecture for IPv6
RFC 2373 — IPv6 addressing	RFC 3542 — Advanced sockets API for IPv6
RFC 2460 — IPv6 protocol specification	RFC 3587 — IPv6 global unicast address format
RFC 2461 — Neighbor discovery	RFC 3736 — Stateless DHCPv6
RFC 2462 — Stateless autoconfiguration	RFC 4213 — Basic transition mechanisms for IPv6
RFC 2464 — IPv6 over Ethernet	RFC 4291 — Addressing architecture for IPv6
RFC 2711 — IPv6 router alert	RFC 4443 — Internet Control Message Protocol (ICMPv6) for the IPv6 Specification
RFC 3056—Connection of IPv6 Domains via IPv4 Clouds	RFC 5340—OSPF for IPv6
RFC 3315 —Dynamic Host Configuration Protocol for IPv6 (DHCPv6)	RFC 5187 —OSPFv3 Graceful Restart
RFC 3484 — Default address selection for IPv6	RFC 6164 — Using 127-Bit IPv6 Prefixes on Inter-Router Links
RFC 3493 — Basic socket interface for IPv6	RFC 6583 — Operational Neighbor Discovery Problems
SUPPORTED MIBS	
Base Package MIBs	MIBs can be dowloaded here: http://www.netgear.com/support/product/M4300-8X8F?cid=#download

RFC 3419 — TRANSPORT-ADDRESS-MIB	IPv6-MIB (draft)
IPv6-ICMP-MIB (draft)	
IPv6 Routing MIBs	
RFC 2465 — IPv6 MIB	RFC 2466 — ICMPv6 MIB

XMODEM	Yes	
SNMP v1/v2	Yes	
SNMP v3 with multiple IP addresses	Yes	
RMON 1,2,3,9 Max History entries Max buckets per History entry Max Alarm entries Max Event entries Max Log entries per Event entry	Yes 3 * (number of ports in the chassis + LAG + 10) 10 3 * (number of ports in the chassis + LAG + 10) 3 * (number of ports in the chassis + LAG + 10) 10	
Port Mirroring Number of monitor sessions Tx/Rx Many to One Port Mirroring LAG supported as source ports Max source ports in a session	Yes 1 (multiple sessions are configurable) Yes Yes Yes Total switch port count	
Remote Port Mirroring (RSPAN)	Yes When a particular session is enabled, any traffic entering or leaving the source ports of that session is copied (mirrored) onto a Remote Switched Port Analyzer (RSPAN) VLAN	
Flow based mirroring	Yes	
Cable Test utility	Yes	CLI, Web GUI
Outbound Telnet	Yes	
SSHv2 SSH Session Configuration	Yes Yes	Secure Shell version 2 (OpenSSH 7.5p1)
SSL v3 and TLS v1.2 for HTTPS web-based access	Yes (Open SSL 1.0.2o)	
2048-bit RSA key pairs	Yes For SSLv3 and SSHv2	
SHA2-256 and SHA2-512 cryptographic hash functions	Yes For SSLv3 and SSHv2	
File transfers (uploads, downloads)	TFTP / HTTP	
Secured protocols for file transfers	SCP / SFTP / HTTPS	
HTTP Max Sessions	16	
SSL/HTTPS Max Sessions	16	
HTTP Download (firmware)	Yes	
Email Alerting	Yes (CLI only)	
Syslog (RFC 3164) (RFC 5424)	Yes, forwarding messages via UDP using the Syslog protocol to one or more collectors or relays	
Persistent log supported	Yes	
USER ADMIN MANAGEMENT		
User ID configuration Max number of configured users Support multiple READWRITE Users Max number of IAS users (internal user database)	Yes 6 Yes 100	
Authentication login lists	Yes	
Authentication Enable lists	Yes	
Authentication HTTP lists	Yes	
Authentication HTTPS lists	Yes	

Authentication Dot1x lists	Yes	
Accounting Exec lists	Yes	
Accounting Commands lists	Yes	
Login History	50	
M4300 SERIES - PLATFORM CONSTANTS		
Maximum number of remote Telnet connections	5	
Maximum number of remote SSH connections	5	
Number of MAC Addresses	256K (M4300-96X) 128K (M4300-24X24F, M4300-48X, M4300-48XF) 16K (all other models)	
Number of VLANs	4,093 VLANs (802.1Q) simultaneously - standalone mode 4,093 VLANs - stack mode (except when mixed stacks of M4300-96X with other models - 1,024 VLANs only)	
VLAN ID Range	1 - 4093	
Number of 802.1p Traffic Classes	8 classes (standalone)	7 classes (stack)
IEEE 802.1x Number of .1x clients per port	48	
Number of LAGs	128 LAGs with up to 8 ports per group	
Maximum multiple spanning tree instances (MSTP)	32	
Maximum per VLAN spanning tree instances (PVST)	32	
MAC based VLANS Number supported	Yes 256	
Number of network buffers	246	
Number of log messages buffered	200	
Static filter entries Unicast MAC and source port Multicast MAC and source port Multicast MAC and destination port (only)	 20 20 2,048	
Subnet based VLANs Number supported	Yes 128	
Protocol Based VLANs Max number of groups Max protocols	Yes 128 16	
Maximum Multicast MAC Addresses entries	2K	
Jumbo Frame Support Max Size Supported	Yes 9k	
Number of IP Source Guard stations	379	
Number of DHCP snooping bindings	32K	
Number of DHCPv6 snooping bindings	32K	
Number of DHCP snooping static entries	1024	
LLDP-MED number of remote nodes LLDP Remote Management address buffers LLDP Unknown TLV address buffers LLDP Organisationally Defined Large TLV buffers LLDP Organisationally Defined Small TLV buffers	2 x Total stack port count 2 x Total stack port count 100 Total stack port count 12 x Total stack port count	

Port MAC Locking	Yes
Dynamic addresses per port	4096
Static addresses per port	48
sFlow	
Number of samplers	Total stack port count
Number of pollers	Total stack port count
Number of receivers	8
Radius	
Max Authentication servers	32
Max Accounting servers	32
Number of Routes (v4/v6)	
IPv4 only SDM build	12K (M4300-24X24F, -48X, -48XF, 96X) 512 (all other models) SDM (System Data Management, or switch database)
IPv4/IPv6 SDM build	
IPv4 routes	8K (M4300-24X24F, -48X, -48XF, 96X) 512 (all other models)
IPv6 routes	4K (M4300-24X24F, -48X, -48XF, 96X) 256 (all other models)
RIP application route scaling	512
OSPF application route scaling	12K (M4300-24X24F, -48X, -48XF, 96X) 512 (all other models)
Number of routing interfaces (including port/vlan)	128
Number of static routes (v4/v6)	64/64
OSPF	
OSPFv2 max neighbors	400
OSPFv3 max neighbors	400
OSPFv3 max neighbors per interface	100
Tunnels	
Number of configured v6-over-v4 tunnels	8
Number of automatic (6to4) tunnels	1
Number of 6to4 next hops	16
DHCP Server	
Max number of pools	256
Total max leases	2K
DNS Client	
Concurrent requests	16
Name server entries	8
Seach list entries	6
Static host entries	64
Cache entries	128
Domain search list entries	32
DHCPv6 Server	
Max number of pools	16
DNS domain names within a pool	5
DNS server addresses within a pool	8
Delegated prefix definitions within a pool	10
Number of Host Entries (ARP/NDP)	
IPv4 only SDM build	8192 (M4300-24X24F, -48X, 96X) 888 (all other models) SDM (System Data Management, or switch database)
IPv4/IPv6 SDM build (v4/v6)	6144 / 2560 (M4300-24X24F, -48X, 96X) 760 / 128 (all other models)
Static v4 ARP Entries	128
Number of ECMP Next Hops per Route	16 (M4300-24X24F, -48X, -48XF, 96X) 4 (all other models)
Number of ECMP groups	256 (M4300-24X24F, -48X, -48XF, 96X) 128 (all other models)
Total ECMP nexthops in Hardware	4,096 (M4300-24X24F, -48X, -48XF, 96X) 2,048 (all other models)
Maximum MFDB entries	
Native SDM template	2K (M4300-24X24F, -48X, -48XF, 96X) 1K (all other models) SDM (System Data Management, or switch database)
Mixed Stacking mode template	1K (M4300-24X24F, -48X, -48XF, 96X) 1K (all other models)

IGMPv3 / MLDv2 Snooping Limits IGMPv3/MLDv2 HW entries when IP Multicast present	512/512 (M4300-24X24F, -48X, -48XF, 96X) 64/32 (all other models)

Package Content	
All models	Power cord(s) RJ45 straight-through wiring serial console cable to DB9 Mini-USB console cable Rubber caps for the SFP+ sockets Rubber footpads for tabletop installation Installation guide Resource CD with a link to the following manuals and software: - Software setup manual - CLI manual - Software administration guide - Hardware installation guide - The driver for use with The Mini-USB console cable
M4300-8X8F, M4300-12X12F, M4300-24X, M4300-24XF	Half-width switch with one APS250W power supply unit 1-unit rack-mounting kit: one long bracket, one regular (short) bracket, and screws (for front posts) 2-unit rack-mounting kit: one pair of inside and outside middle mounts (for combining two half-width M4300 switches)
M4300-16X (XSM4316PA version 199W PSU)	Half-width switch with one APS199W power supply unit Two regular (short) brackets and screws for two-post rack mount (for front posts)
M4300-16X (XSM4316PB version 600W PSU)	Half-width switch with one APS600W power supply unit Two regular (short) brackets and screws for two-post rack mount (for front posts)
M4300-24X24F, M4300-48X, M4300-48XF	Full width switch with one APS250W power supply unit Two regular (short) brackets and screws for two-post rack mount (for front posts)
M4300-96X (XSM4396K0 empty version)	2RU empty switch without power supply unit (to be purchased separately) Two regular (short) brackets and screws for two-post rack mount (for front posts) Rails and screws for four-post rack mount (for rear posts)
M4300-96X (XSM4396K1 starter kit)	2RU switch with one APS600W power supply unit and six APM408F units (8x1G/10GBASE-X SFP+ Port Cards) in their packaging each Two regular (short) brackets and screws for two-post rack mount (for front posts) Rails and screws for four-post rack mount (for rear posts)
M4300-28G, M4300-52G	Full width switch with one APS150W power supply unit Two regular (short) brackets and screws for two-post rack mount (for front posts)
M4300-28G-PoE+ (GSM4328PA version 550W PSU) M4300-52G-PoE+ (GSM4352PA version 550W PSU)	Full width switch with one APS550W power supply unit Two regular (short) brackets and screws for two-post rack mount (for front posts)
M4300-28G-PoE+ (GSM4328PB version 1,000W PSU) M4300-52G-PoE+ (GSM4352PB version 1,000W PSU)	Full width switch with one APS1000W power supply unit Two regular (short) brackets and screws for two-post rack mount (for front posts)
