<sup>1</sup> Maximum wireless signal rate derived from IEEE Standard 802.11 specifications when used with related Wireless N devices. Actual data throughput will vary. Network conditions and environmental factors, including volume of network traffic, building materials and construction, and network overhead, lower actual data throughput rate. Environmental factors will adversely affect wireless signal range.

<sup>2</sup> Data rates are theoretical. Data transfer rate depends on network capacity and signal strength.

<sup>3</sup> Supported frequency band is dependent upon regional hardware version.

<sup>4</sup> Please check regional mobile operators for 4G LTE/3G mobile Internet availability.
